ADMINISTRATION REPORT OF IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1925-1926

I—General

A—Details of Direct Expenditure

1. In the year 1925-26 the direct expenditure (excluding collection charges) on all Irrigation Works throughout the Presidency amounted to Rs. 324⅔ lakhs compared with Rs. 243⅓ lakhs in the previous year, and Rs. 182¾ lakhs, the average*. The total is classified and divided between the Presidency proper and Sind as follows :—

——	Deccan and Gujarat	Sind	Total
	Rs.	Rs.	Rs.
Works	31,34,497	1,78,65,540	2,10,00,037
Repairs	7,38,353	38,45,301	45,83,654
Establishment	16,18,150	39,22,399	55,40,549
Tools and Plant	1,03,475	2,95,657	3,99,132
Other charges	28,832	21,939	50,771
Gratuitous Relief	....	....	....
Suspense Account	....	4,02,750	4,02,750
Deduct—Receipts and recoveries on Capital Account	7,567	5,071	12,638
Deduct—Receipts and recoveries on Revenue Account	416	362	778
Pensions voted	1,46,425	3,56,404	5,02,829
Total ..	57,61,749	2,67,04,557	3,24,66,306

2. The distribution of the above expenditure under several Irrigation heads is given below :—

Heads			Amount	Remarks
Capital Account—				
Productive Works	2,03,32,856			
Unproductive Works	35,19,488			
			2,38,52,344	
Revenue Account—				
Productive Works	34,73,862			
Unproductive works	19,27,696			
			54,01,558	
Works for which no Capital Accounts are kept—				
Works for which neither Capital nor Revenue Accounts are kept			25,58,198	
Irrigation Works—				
Contribution Works			24,332	
Miscellaneous Expenditure			5,72,446	
15-B Navigation, Embankment, etc.			57,428	
Famine Relief outlay on Irrigation Works			....	
Grand Total ..	....		3,24,66,306	

* In this Report whenever the average is referred to it is the average of the last three years unless otherwise defined.

B—Figures for Works for which Capital Accounts are kept

3. The receipts on Capital Irrigation Works compared with the year's working expenses show a *profit* of Rs. 27,70,025 and Rs. 13,64,591 in Sind and the Deccan and Gujarat, respectively. If, however, interest charges on works in operation are taken into account the result shows a *profit* of Rs. 12,49,843 for Sind and a loss of Rs. 7,75,318 for the Deccan and Gujarat.

Class of Works	Direct receipts	Indirect receipts	Total direct and indirect receipts	Direct expenditure		
				Capital	Working expenses (including the share of collection charges)	Total
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Works for which Capital Accounts are kept						
Productive — Deccan and Gujarat ..	2,438	9,712	12,150	7,578	10,091	17,669
Productive — Sind ..	3,99,174	62,75,594	66,74,768	2,10,47,075	38,20,046	2,48,67,121
Unproductive — Deccan and Gujarat	28,02,386	11,155	28,13,541	33,97,461	14,51,009	48,48,470
Unproductive — Sind ..	10,235	5,44,319	5,54,554	1,22,027	6,39,251	7,61,278

4. The area irrigated under works for which capital accounts are kept was 3,514,500 acres and it showed a decrease of 274,000 acres as compared with the average. The decrease was in Sind where the area irrigated fell from 3,512,000 to 3,216,000 acres. The area irrigated in the Deccan and

Gujarat showed an increase of 22,000 acres over 277,000 acres, the average. The areas and the estimated values of crops are contrasted in the following statement :—

	Area			Value		
	1925-26	Average	Difference	1925-26	Average	Difference
	Acres	Acres	Acres	Rs.	Rs.	Rs.
Productive						
Deccan and Gujarat	2,444	2,993	—549	1,30,278	1,09,792	20,486

C—Figures for Works for which no Capital accounts are kept

5. These are works for which neither Capital nor Revenue accounts are kept or miscellaneous works. The receipts on these works are principally in the form of a share of the land revenue and are termed ' Indirect ' and as such are book credits, so that figures of revenue appearing in the Finance Accounts, as distinguished from the statistical statements accompanying the Irrigation Administration Report, are very small, being for direct revenue only, *viz.*, proceeds from sale of water, etc. The following statements give a comparison of the figures for this year and the average :—

Class of works	Revenue			Expenditure	Net Revenue
	Direct	Indirect	Total		
Works for which no Capital Accounts are Kept	Rs.	Rs.	Rs.	Rs.	Rs.
Works for which neither Capital nor Revenue Accounts are kept — Deccan and Gujarat ..	54,164	5,77,662	6,31,826	8,24,469	−1,92,643

D—Review of Irrigation

Description of Irrigation

6. The irrigation works in Sind are fundamentally different from those in the Deccan and Gujarat. In the latter part of the country each irrigation system depends upon a storage lake near the head of one of the river valleys where sufficient water is collected during the monsoon to supply the country during the year on either side of the river valley below. The canals in Sind on the other hand obtain their supply of water direct from the river Indus. With the exception of a few perennial ones they are all dependent on the natural rise and fall of the water level in the river during the inundation. The canals receive only a scanty supply when the river is low but when the inundation is high cultivation on a large scale is possible. The period of inundation however lasts for about four months only and for the rest of the year irrigation is done by means of wells. The Lloyd Barrage scheme now in progress is intended to remove this defect. When this scheme is completed it will be possible to maintain the water level up—stream of the barrage sufficiently high to give flow irrigation all the year round to a large area now irrigated by lift.

Inundation and rainfall in Sind

7. The inundation of 1925 was a moderate one. The rainfall in the Indus Right Bank Circle was about the average but in the Left Bank Circle it was very scanty.

Irrigation and rainfall in the Deccan and Gujarat

8. In the Deccan and Gujarat rainfall is necessary for agricultural operations and the canals and tanks provide irrigation to more valuable crops and also prove a reliable source of water supply when the rains are holding off. The year under report was a poor one so far as the average rainfall was concerned.

Area irrigated and gross revenue

9. The area irrigated in Sind during the year was nearly 3·3 million acres as against 3·7 million acres in the previous year and the gross revenue amounted to Rs. 82·9 lakhs as against Rs. 95 lakhs for 1924-25. The decreases over the previous year's figures were mainly due to the excellent inundation and the consequent increase in irrigation in that year.

10. The total area irrigated in the Deccan and Gujarat was 454,300 acres as against 428,000 acres in the previous year and the gross revenue amounted to Rs. 34½ lakhs as against Rs. 33½ lakhs for 1924-25.

II—Sind

1. Nature of Inundation and Rainfall

Character of Inundation

11. The inundation of 1925 was on the whole a moderate one. The fair irrigating level of 13 feet on Bukkur gauge was first reached on the 7th July against 19th July last year. This level and above was maintained

for a period of 32 days, as compared with 50 days in 1924, 16 days in 1923, 32 days in 1922 and 33 days, the average. The fair irrigating level of 17 feet on Kotri gauge was first recorded on 27th June or seven days earlier than in 1924 and this level and above was maintained for a period of 76 days, as compared with 86 days in 1924, 76 days in 1923, 102 days in 1922 and 88 days, the average.

12. The highest recorded levels during the year were 15·7 feet on Bukkur gauge on 9th August and 22·1 feet on Kotri gauge on 17th August, as compared with 16·6 feet amd 23·6 feet, respectively, in 1924 and against the maximum recorded readings of 17·9 feet and 23·8 feet, respectively on these two gauges.

Rainfall

13. The rainfall in the Indus Right Bank Circle was about the average and was generally well distributed and beneficial in the later stages of kharif but in the Left Bank Circle it was very scanty and below the average.

2. Indus Right Bank Circle

(i) Works for which Capital Accounts are kept

Desert Canal

14. The Desert canal was opened on 6th June with a gauge reading of 6·5 feet at the head regulator and it ceased to flow on the 17th October 1925. During the season the full supply level and above was maintained in the canal for 29 days against 41 days in 1924. The course of the river above and below the mouth for a certain distance continued the same as at the end of the abkalani of 1924-25. All branches worked satisfactorily and practically all kharif crops were matured. Rotations were started on 25th August, an earlier date than usual, owing to early fall in the river.

15. The Adiowah was opened on the 7th June with a gauge reading of 0·2 feet at its head regulator and ceased flowing on the 30th August 1925. During the early part of August, heavy hill torrents breached the canal at many places as a result of which some damage was done to standing crops. This canal owing to the unfavourable conditions at its head, has not been working satisfactorily for many years. A scheme is now in hand for improving the head.

Unharwah

16. The Unharwah was opened on 7th June with a gauge reading of 5·3 feet at the Tori stop gate head regulator and it ceased to flow on the 11th October 1925. The full supply gauge reading of 9 feet and above at the Tori stop gate was maintained for 42 days, as compared with 49 days in 1924. Owing to the early fall and frequent fluctuations in the river, rotations were resorted to ; but the crops suffered to some extent. At the end of the season the bye river feeding this canal worked right up to the head, thus affording facilities for improvements to the head this year.

Begari Canal

17. The Begari canal was opened on the 5th June with a gauge reading of 5·5 feet at the new head regulator and ceased to flow on the 10th October 1925. In order to relieve the great pressure against the Gouspur loop a cut was made in the Right and Left Banks Begari to pass across flood water standing in the Gouspur compartment. This gave a continuous supply but induced some silting at the head. Throughout the season there was heavy erosion at the head of the canal which silted and had to be cleared by zamindari labour. Owing to the rapid fall in the river, rotations were resorted to which greatly assisted the standing crops.

18. The Choi branch began to flow on 6th June 1925, with a gauge reading of 2·2 feet at the head regulator. It ceased to flow on 18th October 1925. This branch canal takes off at the 6th mile of Begari and irrigates comparatively high lands. Although the water level in the river was low yet the canal worked very well owing to flood water of the Gouspur loop compartment being admitted to the Begari head.

Mahiwah

19. The Mahiwah was opened on the 8th June and it ceased to flow on 27th October 1925. The cultivators did not take full advantage of the available water, which had to be cut off at several places. The canal flowed for 115 days, as compared with 175 days in the previous year. Owing to the rapid fall in the river by the middle of August, rotations were resorted to to save the standing crops.

Sehar Canal

20. The Sehar canal began to flow on 8th June and it ceased to flow on 20th September 1925. This canal takes off from the Gudu dhand. It worked satisfactorily except at the end of the season. The crops were however, saved as far as possible by means of rotations.

21. The Masuwah takes off direct from the river. It was opened on the 4th June, when Bukkur read 7·0 feet, but owing to erosion at the head of the dhand, the canal temporarily ceased to flow on the 10th June. A small cut was given at the head and it began to flow again on the 16th June. It continued to flow till the 27th August 1925. Due to active erosion at the head of the dhand, the feeder channel silted ; but the situation was saved by admitting Mahiwah surplus supply into the Masuwah at mile 20. Rotations were also enforced which benefited the crops to some extent. Thorough clearance has been carried out in the canal and the dhand feeding it.

22. The Maharowah takes off from the dhand feeding the Masuwah. It was opened on the 21st June and ceased flowing on 27th August 1925. The feeder which was excavated last year from the dhand through a sandy kacha bank got silted and a portion of it was eroded away. A new feeder has since been provided through the pucca high bank.

Sind Canal

23. The Sind canal was opened on 4th June and it ceased to flow on 29th September 1925. The new feeder to the canal was completely eroded

up to the head regulator. The Moreshakh which used to take off from the new feeder a little above the head regulator now takes off direct from the river. Its head regulator was carried away by erosion during August.

24. A project for constructing branch canals to take off above the head regulator to Colonel Fife's Channel has been prepared in the rough and another for a distributary from 5th mile Mirzawah is under preparation.

Garkino Canal

25. The Garkino canal takes off from a small dhand. It was opened on the 27th June and ceased flowing on the 13th September 1925. The canal was badly damaged by breaches in the flood Diversion bund below the cross regulator in mile 2/7. Most of the kharif crop was submerged by flood water. The loss has, however, been largely compensated by the cultivation of rabi crop in the tract flooded.

Ghar Canal

26. The Ghar canal commenced flowing on the 7th June and ceased to flow on 17th September 1925. Owing to the low level of water and unfavourable action of the river, the Ghar dhand completely failed during the season. The supply in the first 20 miles of the canal was consequently poor, but the remaining 20 miles of the canal fed by the Fordwah worked fairly well. The prescribed full supply level of 11 feet was recorded for only nine days as compared with 50 days of the last year.

27. The Fordwah now takes its supply direct from the main river which flows close to it. The river was cutting heavily on its right bank in a forest, with the result that the head regulator and the approach channel were badly blocked. Great efforts were made to clear the canal and the regulator but by the time they were cleared of silt and kachra the river changed its set and no further trouble resulted on this account.

28. The two main branches into which the Ghar canal bifurcates at mile 40/6 are the Naurang and the Nurwah. The former remained practically unaffected either by the poor inundation or by the failure of the Ghar dhand ; the latter suffered to some extent from deficiency ; but on the whole both worked satisfactorily. The supply in the Gath and Chilo, the branches into which the Naurang bifurcates at mile 8, was good and the crops matured.

29. The Kur Dato is the second large branch 26½ miles long, which takes off from the Ghar at mile 37. On account of the low river and failure of Ghar dhand as well as the early trouble experienced in the Fordwah, this canal suffered from deficiency till the middle of July. Later on the supply improved but was largely consumed, before it reached the tail, and rotations were resorted to for the benefit of the lower reaches.

30. The Nasrat *ex* Ghar takes off from the Ghar dhand above the Ghar head. Its fate was as bad as that of the Ghar main in the upper reaches. The gauge at its head recorded 10 feet for only five days during the season.

Sukkur Canal

31. The Sukkur canal has two heads, one for kharif called the Rahuja head, which gets its supply from the bye-river, and the other for rabi called the old head, which takes off directly from the river at Sukkur. There was no trouble in the bye-river, but the river levels being low, the supply was insufficient for the demand. The Sukkur main canal was opened on 7th June and it ceased to flow on 18th October 1925. The kharif head of the canal worked satisfactorily; but owing to the low inundation, deficiency of supply was experienced. The prescribed full supply level of 17 feet was maintained at the Shikarpur roadbridge gauge for 22 days only, as compared with 49 days in the last year. This shortage was chiefly felt in the upper reaches up to mile 40. The supply below mile 40 remained satisfactory throughout. To help the standing crops in the upper reaches, the rabi head was opened on 4th September.

Western Nara

32. The Western Nara was opened on the 4th June with a gauge reading of 7·0 feet at the head regulator. The full supply level was reached on the 19th July and maintained for 27 days. Owing to the abrupt fall in the river at the end of August, rotations were enforced to save the standing crops. Some kachra and trees found their way into the canal due to erosion of the river but they were promptly removed and the head regulator kept clear throughout the season. Owing to the main channel of the river having threatened the Gap bund last year, the Nara Diversion Channel was constructed from mile 6/1 of New Akil Channel to mile 3/0 of old Nara. The bunda constructed at Chario Wahur head to restrict supply flowing to the Manchar and to minimize damage to kharif cultivation on the tail of Nara, was eroded with some resulting damage to the kharif cultivation.

33. The new feeder to the Nara, excavated in the year 1893, worked well for the first few years, but it has proved a failure since the excavation of the Akil mouth. It began to flow on 1st July and ceased to flow on the 1st September 1925.

Pritchard

34. The Pritchard canal was opened on the 3rd June and ceased to flow on the 7th December 1925. The canal at present derives its supply direct from the main channel of the river. The erosion above and below its head continued for a short time but gave no trouble. The canal worked very successfully.

Pinyari Canal

35. The Pinyari canal commenced flowing on 29th May and temporarily ceased to flow on 1st June 1925 on account of the fall in the river. It again flowed with the rise in the river on the 5th June and finally ceased to flow on the 5th October 1925. A breach in mile 25 of Mulchand Shahbunder bund damaged a considerable area of standing crops on this canal. Many acute bends in the canal have been eliminated in the past three years and this has greatly improved the conditions in the upper reaches; but the tails have not hitherto benefited much as the distribution on the

whole system is faulty and most of the canals are not sufficiently large to carry the required discharge. It is therefore necessary to remodel the whole system for which survey estimates have been sanctioned and survey work is almost completed. The whole system worked satisfactorily and the full supply level of 12·5 feet and above was maintained for 83 days during the inundation.

Baghar Canal

36. The Baghar canal commenced flowing on the 15th May and ceased to flow on 16th December 1925. A head regulator is under construction over it which is now nearing completion. The regulator will protect the tract from the flooding which has till now been a normal result of entire absence of control of supplies entering the Baghar.

37. As the canal at present yields a return of over 4 per cent. and is thus qualified for being ranked among productive works its transfer to the productive class has been sanctioned and will take effect from 1st April 1927.

Kalri Canal

38. The Kalri Canal commenced to flow on 8th June and ceased flowing on 2nd October 1925. The system worked very satisfactorily, flowing for 115 days. Deficiency was however felt in the tail of some branches. A project for remodelling the system is under consideration.

Sattah

39. The Sattah canal was opened on 7th June, when Kotri read 13·6 feet and it flowed for 125 days. The canal is connected with the river by a channel called the Sattah Naro, which as usual silted up badly with the fall of the river. Clearance was however immediately done after which the canal worked very well. Deficiency was experienced in the lower reaches and to remedy this, reduction of karias, which draw off excessive supply, is necessary in the first eight miles of the canal.

(*ii*) *Works for which neither Capital nor Revenue Accounts are kept*

40. The following were the principal works which were completed or were in progress during the year under report :—

Karachi Canals Division

	Rs.
Raising and strengthening Mulchand Shahbunder bund, mile 0 to 14	25,913
Raising and strengthening Mulchand Shahbunder bund, mile 42/0 to 52/0	22,000
Extension of Khanto tail embankment	14,960
Raising and strengthening Baghar Uchito bund, mile 24/5 to 26/1 and 27/2 to 29/3	23,993

Western Nara Division

Constructing New Abad loop bund and diversion channel ..	67,173
Constructing new cut to new Feeder	20,096

Ghar Canals Division

	Rs.
Constructing a wetting bund and trench for the Mitho Phulu bund, mile 36/0 to 40/4	16,548

3. Indus Left Bank Circle

(*i*) *Works for which Capital Accounts are kept*

41. The canals in the Indus Left Bank Circle fall under two groups, *viz.* (*a*) The Eastern Nara System and (*b*) Canals taking off direct from the Indus.

Under (*a*) are the Nara River, the Jamrao, the Mithrao, the Khipro, the Thar and the Hiral canals, all of which except the Khipro canal, which flows during the inundation only, are semi-perennial. The Thar and Hiral canals are however closed on 1st December every year to save the lands under their command from being water-logged.

Under (*b*) are the Dad, the Nasrat, the Fuleli, the Hassanali and a large number of small canals all classed as inundation canals. The Fuleli however receives a very fair rabi supply.

(*a*) The Eastern Nara System

Nara Supply Channel

42. The Nara supply channel is an artificial cut 12 miles in length taking off the river on its left bank above Rohri and forming the mouth of the Nara, an ancient course of the Indus. Its discharging capacity is about 20,000 cusecs during high inundation. The Nara river below the supply channel has no regular banks and as soon as the discharge in it exceeds 5,000 cusecs the water begins to overtop the banks and touches the flood diversion bund on the east and the hills on the west.

43. The canal worked fairly satisfactorily during the year. The river this year was particularly low about 2 feet below the average of last ten years ; but notwithstanding the poor supply the channel maintained its flow throughout the cold weather season.

44. The maximum discharge was 20,493 cusecs with a gauge reading of 23·5 feet upstream and 22·8 feet downstream on 8th August 1925, as against 22,262 cusecs observed last year on 9th August 1924 with a gauge reading of 25·2 feet upstream and 24·8 feet downstream.

45. The minimum discharge was 14 cusecs with a gauge reading of 5·3 feet upstream and 5·3 feet downstream on 10th March 1926, as against 122 cusecs on 28th March 1925 with a gauge reading of 5·8 feet upstream and 5·8 feet downstream.

46. Heavy silt was deposited at the 7th, 8th and 9th mile as well as the 16th and 22nd mile. The deposit in the 7th to 9th miles was due to very wide section, but this has been considerably improved by groyning.

47. During the year the working of the dredger in cut No. 2 helped to remove the silt bar in mile 16 as it appears the actual bed here is lower than the designed bed. The dredger has this year worked satisfactorily in cuts Nos. 1, 2 and 3 and it is proposed to complete cuts Nos. 1 and 4 to

full section in the next working season. On completion of these cuts, the dredger will work on removing the most obstructive silt bar from the 20th mile upwards.

48. Wooden groynes were put in miles 4, 7, 8 and 9 and their effect has been very satisfactory. The banks on both sides of the channel from miles 9 to 11/2 damaged by the floods last year have been repaired.

The Nara

49. The length of the Nara from the end of the Nara Supply Channel to the Jamrao head works is about 96 miles and from the Jamrao to the Thar weir 107 miles. It commands over 500,000 acres of culturable land. The area cultivated during the year on the Nara in the Eastern Nara Division was about 43,931 acres against 47,624 acres of last year and 46,929 acres, the average.

50. The Nara below Makhi is gradually improving. The inner bunds below Makhi have now become fairly well consolidated and do not give much trouble except in miles 6 and 8 when the downstream gauge at Makhi is allowed to exceed 14 feet in order to pass down more water for improving the supply in the Thar and Hiral systems. The Makhi dhand, which is fed from the Nara through the Morhal and Bagdad sang-sluices, forms a reservoir for storage of water for rabi cultivation on the Mithrao canal. This dhand and all other sangs were bunded at the edge of the Nara to prevent losses till the river rose high enough when bunds were breached and water passed into the Makhi dhand. The sluices were fully opened only for two days and partially for two months to feed the dhand which could not be filled to any extent so as to be useful for rabi supplies as there was not much surplus water. Rabi cultivation is done in the dhand.

Jamrao Canal

51. The Jamrao canal was closed on the morning of the 3rd September 1925 and the weir regulator closed as far as possible with the limited baulks available. The under-sluices were opened and the approach channel was successfully cleared of silt during four days and the canal again opened on the 7th September 1925. Apart from this occasion the under-sluices were kept closed and all regulation was done through the weir regulator from 7th June to 17th September 1925. The maximum amount of heading-up upstream of the weir was less than in the last year but greater than in the year 1923. The maximum discharge measured in the Nara above the weir was 10,453 cusecs on 21st August 1925 and the minimum was 171 cusecs on 29th December 1925. The area cultivated during the year was 198,847 acres against 217,982 acres last year and 228,903 acres, the average. The area under cotton was high, *viz.*, about 129,243 acres as compared with 118,294 acres in the last year and 112,547, the average. There was very little rain during the kharif season. Consequently, there was no damage to cotton or seedlings on that account. Practically no rain fell during the rabi season.

52. The total area cultivated under Adhawa crop was only 1,030 acres against 13,920 acres cultivated last year. The decrease is due to scarcity of water supply from February to the beginning of May 1926,

the season for the Adhawa crop. The kharif and rabi areas sown were 186,548 acres and 14,810 acres as against 187,487 acres and 30,495 acres, respectively, in the last year. The decrease in the rabi crop was entirely due to a very unsatisfactory water supply. There was no water in the canal during December 1925 and January 1926, the two months of great demand for rabi cultivation. The small area that was sown in the beginning of the season did not get any more waterings and generally failed to come to maturity. An allotment of new land to the extent of 563 acres was made during the year.

Mithrao Canal

53. This is a semi-perennial canal taking off the Nara above Makhi regulator. In spite of the completion of the Makhi right and left bank distributaries, which supply water to lands above the 9th mile and thus relieve Mithrao of a great drain of water through direct outlets, the full supply level of 10 feet at 9th mile regulator (Kanher) is still necessary for giving full supply in the 9th mile right and left bank branches. The canal was worked with rotations throughout the year. This year also like the past two years the canal passed 14·1 feet on its down gauge at head. This gave a maximum discharge of 2,532 cusecs. The rotations were as usual of six days duration to upper and lower Mithrao in the beginning and end of the season. During July to September, it was possible to increase the rotation period from six to nine days each out of every twelve days for the first time for several years past. This was due to the construction of modules on 30th and 45th mile left bank distributaries last year.

54. The Makhi left and Chotiari minor worked satisfactorily upto their tails while the Makhi right did not work properly owing to low river and consequently some direct mouths for lands not yet finally transferred to it were again allowed.

55. The 9th mile right and left bank branches worked satisfactorily and were free from rotation for about 2 months. The 9th mile right worked upto the tail but the 9th mile left only upto the 13th mile owing to the river being low in the beginning. The Santor minor takes off from the 9th mile left bank branch. It worked satisfactorily . The Kandiari minor takes off from the 9th mile right bank branch. This was not worked beyond the 3rd mile owing to low river in the beginning. As the right bank branch had to be worked to the tail for the first time, direct mouths had to be given at its tail from the Mithrao.

56. The 30th mile left bank distributary was regraded and modules provided. It worked right upto its tail. The zamindars are now satisfied and there is no need for any more direct mouths at the tail.

57. The 45th mile left bank distributary like the 30th mile left was regraded and provided with modules. It also worked quite satisfactorily right to its tail. As in the case of the 30th mile left there is now no longer any need for giving direct mouths to the tail karias.

58. The area cultivated during the year was about 100,503 acres as compared with 107,579 acres last year and 102, 716 acres, the average.

Thar Canal

59. The Thar canal was opened on 24th May 1925 but on account of scanty supply of water coming down the Nara, rotations were given in two sets of 3 days each, with two days closure for collection at Thar weir. The period was increased to 4 days when more water became available and the collection period reduced to one day. The period of rotation was again reduced to 3 days owing to the fall in the river in the end of September. The supplies to the tails of canals were provided by means of the usual internal rotations with the exception of 3rd and 7th mile distributaries. On the latter distributaries direct mouths were allowed as usual at the tails.

60. The cultivation during the year was about 36,282 acres against 43,965 acres last year and 45,369 acres, the average.

Hiral Canal

61. The Hiral canal was opened on 24th May 1925 and worked like the Thar canal with similar rotations. All minors on this canal worked well with rotations. The cultivation during the year was about 11,216 acres against 12,208 acres in the last year and 13,182 acres, the average. An allotment of new land to the extent of 31 acres was made during the year.

Khipro Canal

62. The Khipro canal is purely an inundation canal and commenced flowing on the 9th June 1925 with a gauge reading of 2·3 feet. The Khipro weir was designed to give a full supply level of 5·5 feet to the Khipro canal but this hardly reached 4·8 feet. The last 3 karias got water from Kario Rajwah Bhaiti Ex. Nara mile 86/6.

63. The cultivation during the year on this canal was 4,477 acres against 4,921 acres during the last year and 3,262 acres the average.

(*b*) Canals taking off direct from the Indus

Nasrat Canal

64. The Nasrat canal was opened on 3rd June 1925 and closed on 20th September 1925. The water supply was low for the first fortnight or so of June owing to the silt bar at the head of the Lundi, but it gradually improved and there was an excellent supply during July ; later the supply fell off rapidly owing to the fall of the river and principally to the heavy silting at the head of the Lundi. The sudden failure of the Nasrat induced the zamindars to come forward and with their co-operation attempts were made to bring water into the canal by another cut through a dhoro. The zamindars responded to the call and sent about 1,500 men for the work of the new cut. The old head was cleared and a channel was cut from the dhoro to Lundi dhand, which brought in some water into the Nasrat from 5th to 15th September 1925, but on account of the fall in the river the new cut was not very successful.

65. The cultivation during the year on this canal was about 85,889 acres against 93,187 acres in the last year and 85,278 acres, the average.

66. An allotment of new land to the extent of 640 acres was made during the year under report.

Dad Canal

67. The Dad canal was opened on 3rd June and was closed on 15th October 1925. Although the inundation was not good, yet due to a favourable head and well considered rotations, the canal worked very well. It received full supply level for 37 days.

68. The cultivation on the Dad canal including the Ren distributary was about 123,572 acres against 149,261 acres in the last year and 134,533 acres, the average.

69. The Ren distributary takes off from the Dad canal at mile 47/4 right bank and irrigates most of the tract formerly watered by Renwah and other canals. There is a cross regulator at 50th mile of the Dad by closing which the Ren distributary can be made to get full supply level and be given advantage of rotations, when the supply is deficient or the water level low. Some of the crops on this system were saved by rotations carried out along the Dad after the river had fallen low. On the whole this distributary worked satisfactorily.

Naulakhi Canal

70. The Naulakhi canal was opened on 3rd June and closed on 29th October 1925. It worked very well and there was a good supply at the tails of all the branches till the end of August. Owing to the rapid fall of the river the water level fell rapidly and the discharge diminished. It got full supply level for 31 and 37 days at the Darbelo and Tharushah bridges, respectively.

The area cultivated during the year was about 54,117 acres against 54,416 acres in the last year and 48,545 acres, the average.

Dambhro Canal

71. The Dambhro canal was opened on 4th June and closed on 23rd September 1925. This canal had practically no trouble and all its branches flowed successfully up to the end. It got full supply level for 54 days. The area cultivated during the year was about 14,664 acres against 17,476 acres in the last year and 14,291 acres, the average.

Fuleli Canal

72. The new Fuleli canal and the new head regulator worked satisfactorily. No adjustment of the weights in the balance boxes was necessary during the year. The maximum gauge readings up and down stream were 21·5 feet and 18·3 feet, respectively, and the maximum and average discharges were 10,166 cusecs and 8,527 cusecs, respectively, whereas those of the last 7 years were 10,574 cusecs and 7,740 cusecs, respectively. Groynes were constructed at places of erosion along the canal. The work of raising the banks of the Fuleli canal from head to mile 81/2, which was in progress during 1924-25, was completed during the year.

73. The following works were in progress :—

(1) Survey of Mehrani canal,

and

(2) Remodelling and branches of the Fuleli canal.

74. The area irrigated during the year was about 445,924 acres against 433,534 acres in the last year and 418,871 acres, the average.

75. The old Fuleli worked fairly well throughout the season. A new cut from the river was made at the head during the last working season as the dhand through which it used to get its supply had silted up. The new cut worked satisfactorily. The canal maintained a 10 feet level and above for 55 days as compared with 49 days, the average of last 8 years, and 77 days during the abkalani of 1924, which was exceptionally high. The maximum and average discharges were 2,084 cusecs and 1,570 cusecs, respectively as compared with 2,589 cusecs and 1,489 cusecs, the maximum and average discharges of the last 6 years.

Hasanali Canal

76. This canal takes off from the Indus just below the village of Katiar. The canal does not silt owing to a good draw-off in the tail portion. This year there was some clearance in the first 14 takis of the canal. In order to stop spill water from entering the canal its banks from the head regulator to the river were raised and strengthened. The canal works fairly satisfactorily but distribution is very necessary.

77. The area cultivated during the year was about 18,984 acres against 20,289 acres in the last year and 18,789 acres, the average.

Other canals in the Fuleli Canals Division

78. These canals, which were formerly shown under " Works for which only revenue accounts are kept " are now classed under " 55-A-Irrigation Works." The canals in the Hyderabad sub-division did not work well. The Chandanwah ceased to flow at the end of 30th August 1925 but by an arrangement with the Forest Department, the new sluice in the Chandan embankment was opened and Ghallian compartment water let into the Chandan. This was distributed equitably amongst the various branches ex. Chandan. Thus the situation to a great extent was saved. The canals in the Katiar Sub-division worked fairly well except in the extreme tails. Projects are under preparation for (1) New Burli Branch from the Hasanali to feed the tails of Khairwah, the Dhadhko and the branches of the Mulchand canal and (2) for removing bends of the Mulchand canal, whereby it is hoped the tails of branches at present suffering from deficiency will have enough water.

79. The area cultivated during the year was 31,724 acres.

Canals in the Hyderabad Canals Division

80. The Alibahar Kacheri, the Great Marakh, the Sarfraz, the Gharo Mahmudo, the Nasir and the Kari Shumali are now classed under " 55-A-Irrigation Works ". All the canals except the Great Marakh and Kari Shumali systems work unsatisfactorily. Owing to the river being very low at the end of the season some deficiency was felt in their branches.

81. A portion of the crops was saved by rotations, as far as possible. The cultivation in the whole of the Hyderabad Canals Division, except the Ren distributary, was about 271,432 acres against 285,067 acres in the last year and 270,358 acres, the average.

(ii) Works for which neither capital nor revenue accounts are kept

82. The Mehrab and " other canals " in the Nasrat Canals Division worked satisfactorily during the year, but the Renwah and " other canals " in the Hyderabad Canals Division suffered from deficiency of water supply.

4. Protective embankments

Kashmor bund

83. The maximum gauge readings recorded at important places along the Kashmor bund, *viz.*, Gouspur loop 0/0 mile, Tori bund mile 7/3 and new Tori cross bund were 11·20, 11·50 and 10 feet, respectively. The emergency loop was breached on 2nd June 1925 and water entered the Gouspur compartment, which gradually rose to 11·10 feet and 0·0 gauge on 7th August 1925. There was heavy erosion in the neighbourhood of mile 3/6 of the 1896 loop. The pumps at Choi, Tori and Gouspur worked continuously during August in order to soak the bunds thoroughly. Wave-wash along the front slope of Gouspur loop was very severe and did considerable damage.

Ghar bunds

84. Owing to the low river there was no water against the Saidabad Jhalli bund. The Mitho Phulu bund was however subjected to greater pressure of water than in the last year as a result of which three bad leaks occurred in it, which were promptly closed. River erosion continued opposite mile 38 to 45 of the bund line.

Western Nara Bunds

85. The length of the river bund in the Western Nara Division is 101 miles. Owing to the low abkalani, the bund could not be wetted throughout its length, but it stood quite safe. There was heavy pressure of water in the portion between miles 42 to 45 which caused some anxiety but danger was averted by vigilant watch. There was also wave-wash along Puranodeo bund but no damage was done. Water did not touch the bund in miles 49 to 51. The two new mangulis constructed at the sites of last year's breaches were thoroughly wetted.

Bunds in the Shikarpur canals Division

86. *Sukkur Begari Bund.*—Water touched the entire length of the front bund by the end of July. There being wetting channels to all the loops, the bund was soaked and some leaks and minor breaches occurred, which were promptly closed. In the beginning of July there was danger to Gouspur loop and both banks of Begari Canal were cut above its head regulator and water passed to the Sukkur Begari bund compartment, heading up against this bund before finding its way back to the river. The erosion having increased at the end of July, the Alishah loop and the Sukkur Begari Bund portion from mile 27/6 to 28/1 were eroded. As a result of this water filled the Satabani loop compartment causing several leaks, which were however successfully closed.

87. *Flood Diversion bund.*—There were three serious breaches and numerous leaks. The leaks were immediately closed ; but the breaches being uncontrolable were allowed to flow. The bund line being kalarish, is liable to breaches. It is being strengthened.

Bunds in the Karachi Canals Division

88. Though the river maintained very good levels much above the average during the months of June to August, the bund lines withstood the high pressure of the river spill except in the following compartments :—

1. *Sheikhani bund.*—A serious leak occurred in the new manguli constructed around the breach of 1924 in this bund ; but it was detected and closed.

2. *Sonda Taraki loop.*—This was a new loop given to the old Sonda Hillaya bund from mile 0 to 4. Before it could be completed, the abkalani set in and two bad leaks occurred one of which was immediately closed ; but the other developed into a breach. It however did little damage as the flood water was held up at the tail of the Kinjhar dhand.

3. *Sonda Hillaya bund.*—There was severe wave-wash against this bund on the back side on account of flood water, which did much damage to the bund and eroded a portion of New Sonda Taraki loop. Damage to kharif crop has been largely compensated by rabi cultivation in the tract flooded.

4. *New Thahimani Abad loop.*—A bad leak which occurred in this bund, was detected and closed.

5. *Mulchand Shahbunder bund.*—A few leaks occurred in mile 3/3 in the new Manguli constructed but they were closed. Of the three more leaks, which occurred through forest sluice in mile 24/7, two were closed ; but the third one developed into a breach. As a result of the breach a considerable area of kharif crop in Sujawal and Jati talukas was flooded and considerable damage resulted.

89. The total mileage of bunds in the Nasrat Canals Division is 15 miles. They all stood the water pressure well.

90. Ren and Saidachar bunds are the only bunds in the Hyderabad Canals Division. The Ren bund, which is intended to protect the country served by the Ren distributary from being flooded, is $3\frac{3}{8}$ miles in length. Saidachar bund is 3 furlongs and 420 feet in length, and is intended to protect the country round about Sakrand from being flooded from the escape of the Dad canal. No leaks or breaches occurred in these bunds.

91. There was not much trouble experienced with the river bunds in the Fuleli Canals Division during the year. Jamshora front bund suffered to some extent from wave-wash on account of high winds. The erosion which has been occurring for some time in front of the Ghallian reached the front bund and eroded a portion of it. The erosion is still proceeding slowly and a total length of $2\frac{1}{2}$ furlongs has been eroded. The river is now about 130 feet behind the original bund line. The breach in the bund is from miles 1/2 to 1/5. The erosion extends along the river from the

Old Fuleli head for a distance of 2½ to 3 miles down stream. Raising and strengthening Ghallian bund, Chandan, and Old Fuleli embankment was done during the year under report.

Hajipur Bund

92. Water touched the bund on 26th June 1925 at miles 0/6 to 1/4 and 14/4, when Kotri gauge was 16·7 feet. Cuts were as usual made from Wasingwah, Nurwah, Khairwah and Khokherwah for wetting the bund. As the level of water in the river was low, it could not be wetted till 31st July 1925. Water touched the bund in its entire length, when Kotri gauge read 21·6 feet. The bund as usual was subject to wave-wash at miles 1/3 to 1/7, 2/7 to 3/7 and 13/5 to 14/6 and to heavy wave-wash from mile 14/5 to 14/6. Owing to wave-wash against the bund, portions at miles 2/2 to 2/6, 3/5, 13/4 to 13/5 and 14/5 to 14/6 have been provided with stone pitching at a cost of Rs. 17,500.

93. Owing to erosion in miles 7 to 9 of the bund and nearness of the river, proposals regarding constructing Sang loop bund are under consideration.

5. Indus River Commission

Indus River Commission Works and their classification

94. The expenditure on all the works including surveys carried out under the direct supervision of the Chief Engineer in Sind during the year under report was charged to ' 15-Other Revenue Expenditure financed from ordinary revenues—Works for which neither Capital nor Revenue accounts are kept.'

Survey of the Indus

95. The Indus from 34 miles above Kashmore to the bifurcation at its delta was surveyed and the portions of the two branches below the point of bifurcation, *viz.*, first 18½ miles of the river Hyderi and the whole of river Uchito 69½ miles were surveyed and plotted. The total length of the survey traverses done during the year was 1,082 miles against 1,033 miles last year.

Demarcation of district and Khairpur State boundaries

96. The work of maintaining district boundaries by keeping the base lines clear of jungle was carried out. Besides this the inspection of Khairpur and Bahawalpur boundary rails was done and some of the mid-stream points of the boundaries were fixed.

Gauge readings

97. The usual observations of Indus river discharges and gauge readings at Mithankot, Sukkur and Kotri, were made daily during the year, except at Mithankot where, owing to a very strong current, observations were not possible from 1st June to 31st August 1925. Gauge readings of the river were observed twice a day, at 2 stations, daily at 9 stations, twice a week at 4 stations and once a week at 6 stations.

98. All these gauges are maintained for the purpose of fixing the high flood levels to be adopted for the river embankments, recording the changes in the level of supply at canal mouths and observing any permanent change in the water levels of the river.

Scientific works and discharges of the Indus

99. The discharge and other scientific observations were continued at Sukkur and Kotri as usual. The results will be published in the Indus River Commission records. The total monthly discharge at Sukkur during the inundation season and the maximum, minimum and average discharges of the year compared with the results of the previous four years are as follows :—

Month	1921-22	1922-23	1923-24	1924-25	1925-26
	Cusecs	Cusecs	Cusecs	Cusecs	Cusecs
June	5,377,740	9,971,573	7,030,265	5,452,253	7,187,685
July	9,297,557	13,219,431	9,535,084	13,828,033	13,178,300
August	14,623,091	14,413,531	15,129,163	17,430,248	15,104,765
September	7,762,473	11,603,767	8,799,072	10,656,104	5,832,236
Total ..	37,060,861	49,208,302	40,493,584	47,366,638	41,302,986
Average discharge ..	303.777	403,347	331,915	388,251	338,549
Maximum discharge ..	605,278	591,797	633,466	706,075	645,107
Minimum discharge June to September ..	96,869	168,815	114,528	106,425	106,653
Minimum discharge observed throughout the year	35,894*	32,449	30,076	30,330	24,785

* The figure as reported for 5th February 1922 has been adopted and is different from that mentioned in the Report for 1921-22 as occurring on 10th December 1921.

The discharge observations of the Indus at Mithankot below its junction with the Chenab were also taken as in the previous year.

Fleet

100. The S.S. " Fateh Mubarak " and the S.L. " Madge " were beached and renewals of their bottom steel plates were carried out. The M.L. " Dorothy " was also repaired.

Extensions and Improvements and special repairs

101. The estimated cost of works under these heads sanctioned or approved during the year by the Indus River Commission for execution by the Executive Engineers and by the Commission, is as follows :—

Division	Extensions and Improvements	Special Repairs	Total
Indus Right Bank Circle	Rs.	Rs.	Rs.
Ghar Canals Division ..	17,154	1,47,271	1,64,425
Begari Canals Division ..	26,273	37,980	64,253
Shikarpur Canals Division ..	46,880	71,282	1,18,162
Western Nara Division ..	1,764	1,45,854	1,47,618
Karachi Canals Division ..	1,33,035	79,361	2,12,396
Total ..	2,25,106	4,81,748	7,06,854
Indus Left Bank Circle			
Hyderabad Canals Division ..	....	....	....
Nasrat Canals Division ..	10,919	1,13,358	1,24,277
Fuleli Canals Division ..	1,34,667	....	1,34,667
Total ..	1,45,586	1,13,358	2,58,944
Indus River Commission and Indus River Gauging Division			
Karachi Buildings Division ..	15,028	....	15,028
Shikarpur Canals Division ..	....	378	378
Total ..	15,028	378	15,406
Grand Total ..	3,85,720	5,95,484	9,81,204

Works under the direct control of the Indus River Commission

102. The total expenditure incurred and accounted for by the Indus River Commission was :—

	Rs.
Works	10,602
Repairs	27,970
Tools and Plant	5,052
Grand Total ..	43,624

Erosion

103. In the Begari Canals Division there was heavy erosion in front of the new emergency loop of the Kashmore bund. It has got the Gouspur

loop behind it which maintains intact the double line of river bunds in the Division. Erosion opposite mile 18/3 to 18/6 of Sukkur Begari bund opposite Ghari Adushah village in the Shikarpur Canals Division continued. Active erosion was in progress opposite Loi in mile 26/7 to 28/2 of Sukkur Begari Bund and ultimately a portion of Sukkur Begari Bund and Alishah Loop and Loi Bungalow were carried away. The Satabani Loop behind, which is now the only line of defence, was sand-cored in weak portions and was provided with trenching bund.

104. In the Western Nara Division erosion was active at the head of Chario Wahur near Sehwan and Nara Bund at mile 100/7 was eroded away. A manguli to Nara Bund from mile 99/4 to the right bank of Chariowah was constructed.

105. In the Karachi canals Division there was active erosion opposite Sonda Taraki Loop at Takis 1,14,17 and 27, and a breach occurred in the loop at taki 1 on the 8th July 1925, which was closed after the abkalani. There was erosion in progress in mile 4/1 to 4/2 of Kokawari Bund, mile 7/7 of Thahimani Gulel Loop and mile 28/0 of Baghar Uchito Bund during the year.

106. There was active erosion opposite mile 1/0 to 2/0 of Ghallian Front Bund in the Fuleli Canals Division and the bund was eroded between miles 1/3 and 1/4. There is a loop behind it.

6. Lloyd Barrage and Canals Construction

General remarks

107. The year under report is the first full working year for the execution of the Lloyd Barrage and Canals Scheme and was devoted to the detailed surveys, levelling, aligning and designing of canals, acquisition of land, excavation of canals both by dragline machines and manual labour and preparation of detailed plans and estimates for earthwork and buildings. As regards the construction of the Barrage the year was devoted to the further development of all the preliminary works, indents for plant, construction of buildings, erection and housing of special plant and machinery, opening and development of stone quarries on both banks of the river, erection and launching of barges and pontoons for the river fleet and testing of the two suction dredgers, installation and testing of electric power plant and supply of electric current to workshops, townships and other power plant, and construction of deep water wharves on either bank of the river.

108. The whole scheme is divided for the purpose of this report into four sections :—

(1) Right Bank canals,
(2) Left Bank canals,
(3) Eastern Nara works,
(4) The Barrage.

109. The Right Bank canals are in charge of the Superintending Engineers, North-Western and Western Circles. They comprise (*a*) the North Western Perennial canal and its branches, (*b*) the Dadu Canal and its branches and (*c*) the Central Rice canal and its branches.

110. The Left Bank canals consist of the Rohri canal and its branches and the two Khairpur Feeders East and West and except the last named small canal which is in charge of the Superintending Engineer, Lloyd Barrage Circle, are in charge of the Superintending Engineer, Rohri Canal Circle.

111. The Eastern Nara works consist of the Eastern Nara, Jamrao, Mithrao, Thar and Hiral canals and are in charge of the Superintending Engineer, Eastern Nara Circle.

112. The Barrage with the river training works and the head works of the main canals is in charge of the Superintending Engineer, Lloyd Barrage Circle.

The North Western and Western Circles

North Western Perennial and Dadu Canals

113. The best and cheapest alignments of the North Western Perennial and Dadu canals were finally settled, and permanently located by a centre line. The proposal to start immediately and complete the Central Rice canal within six years instead of in ten years as provided in the project programme, was sanctioned by Government and the work of aligning the canal was completed in a length of 50 miles. The alignment of the Dadu canal was in one place altered to utilise an already excavated new cut of the Western Nara. A slight diversion in the alignment of the canal was also made between miles 35 and 38 with a view to take the centre line through the centre of the Phulpota bridge and thus to utilise it. The question of utilising part of the existing Pritchard canal for the main Dadu canal was considered in detail and the proposal was adopted. The work of collecting details of survey numbers for the whole area of 800 square miles for preparing the final design of the Central Rice canal was completed and an alternative line was surveyed for certain short lengths of the Johi branch beyond the main valley line so as to make as much use as possible of the right bank of this branch as a protective embankment for keeping out floods.

Munchar Drainage Scheme

114. Progress was made with investigations in connection with the Munchar drainage scheme. The proposals under consideration comprise a bund around the Munchar, a drain from the Munchar to the river and the protection of the cultivated area between the Hamal and the Munchar. The question of diverting the Gaj Nai has also been considered and there seems little doubt that it will be absolutely necessary to divert it. Proposals are also under consideration for costructing a regulator on the Aral wah at Sehwan and also on the main drain where it passes through the bund round the Munchar and for remodelling the existing Dadeji dhoro to serve as an irrigation channel for watering all the kharif lands south of the Munchar. The detailed estimates for the Dadu canal were completed. Earthwork estimates for the Johi, Shahdadkot and Ratodero branches were taken in hand. Those for the Central Rice canal and the Warah Branch will be taken in hand as soon as the designs of these canals are finally approved.

Land

115. Satisfactory progress was made with the acquisition of land for main and branch canals and for distributaries. Bench marks on the wells selected for sub-soil observations were connected with G. T. S. Bench marks and observations in connection with the sub-soil water taken. A carefully plotted record of these observations is being maintained as it may afford very valuable information in dealing with the drainage problem later on.

Buildings

116. Good progress was made with the construction of buildings. Gauge posts were fixed along the northern boundary of the Khirtar branch, to ascertain the extent of hill torrents coming from the Khirtar mountains.

Excavation of Earthwork

117. Good progress was made with the excavation of main canals and branches by means of dragline machines and by manual labour. In the North Western Circle the large dragline excavators have excavated the North Western Perennial canal with a bed width of 165 feet and a depth of 10·2 feet in a length of 12 miles. A start has also been made on the Central Rice canal with a bed width of 245 feet and a depth of 11·75 feet and also on the Shahdadkot branch of the North Western Perennial canal by means of two small machines. The total quantity of earthwork done in the Circle during the period under review was about 806 lakhs cubic feet against the approximate total quantity of 7,120 lakhs (Project) to be done to complete the work.

118. In the Western Circle the erection of the large and intermediate dragline excavators was completed. The small dragline machines were employed on excavating the Warah branch, Dadu canal and the Johi branch and excavated about 86 lakhs of cubic feet of earthwork. Owing to the peculiar nature of the country through which the Dadu canal will pass it has been decided to carry out the excavation of this canal partly by mechanical excavators and partly by manual labour. The work let to the contractor from miles 41-52 was proceeded with energetically and about 300 lakhs cubic feet of earthwork was excavated against the total quantity of 550 lakhs. On the whole the work of excavation in this Circle is now in full swing. The total quantity of earthwork done in this Circle during the period under review is 386 lakhs cubic feet against the approximate total quantity of 12,930 lakhs cubic feet (Project) to be done to complete the work. The actual total is however expected to be considerably less than that projected.

ROHRI CANAL CIRCLE

Rohri Canal, Khairpur Feeder East and branches

119. The surveys of main Rohri canal, Khairpur Feeder East and all branches, distributaries and minors in Rohri Canal No. I Division were completed. Similarly the remaining portion of distributaries in the Rohri canal No. II Division and almost all proposed Government channels in the Rohri canal No. III Division were surveyed. In the Rohri canal No. V Division, the survey of distributaries and minors of the main canal

ROHRI CANAL—Panoramic view of the Rohri Canal at mile 55 excavated by a pair of dragline excavators.

and Surfraz branch and main and branch drains aggregating 680 miles was completed. Estimates of earthwork for the main canal and the Khairpur Feeder East in the Rohri Canal No. I Division were prepared while those for the main canal and Escape No. I in the Rohri Canal No. II Division, were taken in hand. In the Rohri Canal No. III Division, the full supply levels and discharges of channels were fixed and approved for channels finally surveyed. Estimates for earthwork of Escape No. 2, Dad, Thul, Alibahar and Shahdadpur branches were prepared. The detailed working out of outlets, their location and command to enable the detailed design of channels was almost completed.

Land and buildings

120. A very large area of land was demarcated and progress was made in land acquisition. Good progress was made with the construction of buildings.

Excavation of earthwork

121 Good progress was made with the excavation of earthwork by the dragline machines in the Rohri Canal No. I Division. The excavation of the main Rohri canal in the head reach is being carried out by a pair of 320 class Bucyrus machines while at Mehrabpur the main canal is being excavated by a pair of 300 Ruston machines. Similarly the excavation of the Khairpur Feeder East is being carried out by a pair of class 20 Bucyrus machines. In the Rohri Canal No. V Division, the class 20 Bucyrus dragline excavator started excavation on the Nasir branch, working from the road from Lalodero to Oderolal station towards head. After reaching the head it was moved along Escape No. III and again to the Hyderabad branch.

122. In addition to the work by machines some excavation on the Nasir branch beyond the North Western Railway on the downstream side, on the Hyderabad branch and the first two miles of the Hala branch was carried out by manual labour. This being the first year of working with the machines the rates of excavation are susceptible of reduction. With the valuable experience gained it has been possible to keep down the rates. The rates now obtained, including the rates of depreciation, compare very favourably with the possible rates by manual labour for this class of work. From the experience gained, it has been proved beyond doubt that it could never have been possible to carry out excavation by manual labour at the project rates. The total excavation by the large and intermediate machines amounted to 850 lakhs cubic feet against the approximate total quantity of 14,500 lakhs cubic feet (Project) to be done to complete the work.

Sub-soil water levels, etc.

123. Observations of subsoil water levels were taken and the fixing of boundary stones and demarcation was completed. Inspection paths along channels in a length of about 200 miles were completed and the fixing of field and boundary stones on the channels was in course of progress.

Eastern Nara Circle

Surveys of Flood Diversion and Kasimpur bunds, etc.

124. The surveying and levelling of the Flood Diversion bund and the Kasimpur bund for investigation purposes were completed. Similarly the surveying and levelling of all distributaries *ex.* the Khipro canal and Samarjo branch and surveying and levelling and nicking out of the Sufi branch *ex.* the Thar canal were completed and details of area under command were worked out. The survey required for widening the Thar canal upto its 13th mile and contour survey work upto its 16th mile along with the rough proposals for regrading and widening the Thar canal were completed. Similarly the surveying and levelling of the distributary right side of Hiral canal and surveying and lining out of new distributaries *ex.* the main Mithrao canal and the Naokot branch were nearly completed. Cross sections of the Nara at every half mile in a length of 40 miles and at 1,000 feet in a length of 12 miles were taken. Earthwork estimates for flood diversion bank from the Makhi weir to the Khipro weir along the Khipro canal were sanctioned and those for the Samarjo, Nabisar and Naokot branches were prepared. The project for remodelling the Mithrao canal was proceeded with and information for drawing up a project for improving the Jamrao canal and for a project for the Shaho, Sangro and Mirwah branches with their distributaries was mostly obtained and the preparation of estimates will now be taken in hand. The question of closing entirely the mouths of certain "sangs" upstream of the Jamrao head which draw off a very large volume of water thereby causing deficiency at the head of the Jamrao, and of providing some of them with escape sluices with a view to pass out the surplus water and safeguard the banks, was investigated.

Remodelling the Mithrao

Improvements to the Jamrao

125. *Buildings, containing banks, etc.*—Good progress was made with (*a*) construction of buildings (*b*) containing banks in a length of 14 miles above Jamrao head on the right side and of the flood protective bank on the left bank (*c*) containing banks from the Jamrao head to the Makhi weir (*d*) making inspection paths along the Nara right up to the Jamrao head and (*e*) constructing escape sluices over "sangs."

126. *Land.*—Land acquired for the Khipro canal up to its 30th mile, Nabisar, Naokot and Samarjo branches was taken over and nicked out, and that required for the remaining lengths has been notified.

127. *Excavation of earthwork.*—Good progress was made with the excavation of earthwork by small Bucyrus Diesel dragline machines of 30-B and 50-B type. The two 30-B machines have excavated about 73½ lakhs cubic feet of earthwork of the Khipro canal in a length of 8 miles. Four more dragline excavators, two of 50-B type and two of 30-B type, have been received. Of these the two 50-Bs were completely erected and put into commission. They were also employed on the Khipro canal from 8th mile downwards and excavated about 8·30 lakhs cubic feet of earthwork. These types of machines are the first excavators

with internal combustion engines to be used in India. They have proved most useful and will help greatly to solve the problem of the excavation of the smaller canals in isolated places or in localities where water is scarce or unsuitable for boilers. The total quantity of earthwork done in this Circle was 600 lakhs cubic feet against the approximate quantity of 11,920 lakhs cubic feet (Project) to be done to complete the work. The actual total is however expected to be appreciably less than projected.

128. *Sub-soil water levels.*—Sub-soil water level observations of the Jamrao and Mithrao tracts were carried out. Gauges were fixed along the Eastern Nara at various places 6 to 12 miles apart to observe daily readings.

Lloyd Barrage Circle

129. *Land.*—The works in this Circle may be summarised as under:

Practically all land required on the right bank was acquired and occupied though certain lands belonging to the Military and Railway which have been occupied by arrangement require to be formally transferred. Similarly all land required for the Rohri canal, Khairpur Feeder East and the Eastern Nara from the Rohri Khairpur road to the boundary of the Barrage zone was acquired. A further area has still to be acquired for the Eastern Nara and will be taken up as needed.

130. *Township.*—To facilitate execution of works two townships, one on each bank of the river, have been constructed, the area on the right bank being larger than that on the left bank. Each township is provided with a hospital, bazar, market and institute. Both townships are occupied and when fully completed will provide accommodation for 18 officers, 242 subordinates and 340 menials, etc., close to the site of the works. In addition cooly lines are being constructed for the accommodation of semi-skilled labour on both banks of the river. Two large blocks of office buildings on the right bank to accommodate all officers who have their head quarters at Sukkur and a small block of offices for Sub-divisional Officers on the left bank were in course of construction and such of the blocks as were completed were occupied. Roads are provided in the township for communication between the various bungalows, quarters and offices. A nursery is maintained for supplying trees and shrubs for planting along road sides and for boundary hedges for bungalow compounds. All bungalows, quarters, and other buildings were provided with electric lighting. Street lighting was installed on all completed roads and brought into use.

131. *Other Works.*—The only permanent works so far constructed are the upstream guide banks on both sides of the river. They have now withstood three flood seasons without the slightest sign of settlement or damage to the banks or their stone pitching. The falling stone aprons in front of these banks as provided in the project were omitted during construction as they were considered unnecessary. The experience of the last three years, one of which gave an abnormally high and sustained flood, seems to show conclusively that the aprons are unnecessary. The curved masonry retaining wall joining the Sukkur bunder wall to the

right guide bank was completed during the year. Land for completing the roadway connection was acquired from the Sukkur Municipality so that a river-side through road can now be completed connecting the Bunder road with the guide bank and leading to the regulators and the Barrage.

132. *Railways.*—Broad gauge tracks were laid on the right and left banks of the river to connect the quarries with the works yards and Barrage wharves. The total length of track laid up-to-date is 28 miles and except for a few further sidings the whole system was completed on both banks. Similarly a total length of 10 miles of light track (2' gauge) was laid on the two banks of the river to carry materials, stone, sand, etc., either direct from quarries or from broad gauge trucks to works under construction. High service tanks were erected on both banks of the river for supplying fuel and water to locomotives. A loco running shed was built on each bank for cleaning and over-hauling of the engines. The railways were in constant use for the conveyance of materials, plant, etc.

133. *Quarries.*—Three quarries have been opened each with its own power plant for compressed air and necessary pneumatic tools workshops, storeshed, dispensary, works water supply and housing accommodation for the subordinate staff and labour. The Sukkur quarry produces rubble stone for stone pitching and for rubble masonry, both coursed and uncoursed, stone metal for concrete and road making and stone for lime burning. The Kohistan quarry produces rubble stone for pitching and rubble masonry and stone metal for concrete. The Rohri quarry produces special large sized stones to be used on the Barrage and regulators. For the removal of large blocks of stones from the solid mass on the quarry a channelling machine and a number of wire saws are in operation and these blocks, cut direct from the hill side, are transferred by cranes on trucks of the Barrage railway to the stone dressing shop on the left bank works area where they will be cut to required sizes and dressed by machinery ready for building into the work. The machinery for the workshop consists of circular diamond saws, frame saws, rip saws and planing machines and when completely erected will be capable of producing finished blocks of all cut stone work required. The quarries are now in a position to supply all likely demands for stone of all description and have a large reserve stock ready for use. They are connected to the works area by broad gauge track; and stone for building, lime burning, etc., is loaded into trucks at the quarries and brought to site of works, kilns, etc., as required with minimum amount of labour. They are probably the best equipped quarries in India and will be able to meet any demand for stone for all works.

134. *Wharves.*—The deep water wharves on either bank of the river and similar in design were nearly completed. The face of the wharves is formed by a long curve of 40' steel sheet piling meeting the bank at both ends and projecting out about 70' into the river at their centres so as to have always sufficiently deep water along side for all craft at the lowest stage of the river. The length of the curved face of steel piling is 473' in each case and consists of 118 bays each comprising 3 ordinary 15"×5" "Universal" steel piles and clutches and one junction

pile as a stiffener. These face piles are 40′ long and are driven into the river bed till the tops are at R. L. 212·0 which is the level of the top of the guide bank from which a broad gauge railway will run along the completed surface of the wharf. The space between the natural bank and face piling is being filled with earth, partly by the narrow gauge railway with tip waggons and partly by dredgers.

135. *Plant.*—Numerous items of special plant and machinery were purchased during the year through the Director General of Stores, India Stores Department, London, and the Chief Controller of Stores, Indian Stores Department, Simla, and fully equipped Workshops on both banks of the river were completed where every kind of repair work except the very heaviest class can be carried out. The workshops were employed throughout the year both on repairs and miscellaneous work, such as junction piles and rods for the wharves and repairs to parts of dragline excavators. The erection of the heave-up boat was completed and ten 100 ton steel barges were taken over. The two dredgers "Ruk" and "Rohri" which came under tow to Karachi and from Karachi to Sukkur *via* the Indus under their own steam were taken over after they had undergone satisfactory tests. The two terminal pontoons were launched. The anchor pontoons, hydraulic jetting pontoons, pipelines, etc., for the dredger were completed. The two paddle tugs "Courageous" and "Tenacity" which had to come under their steam and delivered afloat at Karachi were detained owing to monsoon at Aden and arrangements are being made for towing them to Karachi. They will proceed to Sukkur from Karachi *via* the Indus under their own power. Six units of floating pile-driving plant were erected by the contractors, tested and taken over. Two portable concrete mixers driven by oil engines were used on various works. Of the two electrically driven air compressors of 300 cubic feet capacity one was erected in the steel erection yard on the right bank and the other will be erected on a barge for use at any point on the river works.

136. On each bank a concrete floor measuring 600′ × 50′ has been laid down on which large concrete blocks for the river bed protection measuring 10′ × 5′ × 3′ and for protecting canal beds immediately below the head regulators measuring 5′ × 3′ × 1½′ will be moulded. Each yard will be served with a set of steel hoppers with elevators for holding stone, lime sand and cement required for blocks and with necessary devices for giving correct quantities for each batch of mixture. The requisite plant has been received and is in course of erection. The power plant was completed, delivered, erected by makers and tested by the Chief Controller of Stores, Indian Stores Department, Simla, during the year under report. The plant consists of (*a*) two sets of Mirrlees Bickerton and Day's Diesel Engines of 300 B. H. P. (*b*) two sets of English Electric Fullager Diesel Engines of 750 B. H. P. and (*c*) two sets of Swiss Locomotive Company's 750 B. H. P. Diesel Engines, all direct coupled to electric alternators generating from 175 K. W. to 510 K. W at 6,600 volts 3 phase 50 periods, and the necessary cooler house and the cooling and settling tanks. The electric transmission lines on both banks of the river were well advanced.

The laying of the two submarine cables across the river, each 4,500 feet long of 3 core H. T. cable, was commenced by the suppliers. Of these one was laid during the year under report while the other has since been laid. These cables are the largest of this length ever imported into India.

137. *Experiments on hydraulic lime and silt observations.*—Experiments on fat and hydraulic lime were continued. Sounding and silt observations on cross sections from the cantilever bridge to the Barrage were continued.

138. *Telephones.*—Telephones were installed on both banks of the river in the Barrage area to facilitate execution of works and also along the lines of the proposed canals and branches on the right and left banks and as Sukkur and Hyderabad are now connected with Karachi by a trunk line, telephonic communication with Sukkur is possible.

139. *Dispensaries.*—Dispensaries were opened in charge of Sub-Assistant Surgeons in the works area on the right and left banks and in the quarries in the Barrage zone. Dispensaries have also been opened at several places on the canals for the treatment of workmen engaged on the dragline excavators. A touring Medical Officer of the rank of an Assistant Surgeon has been appointed to supervise the work of the dispensaries in this administration.

During the period, the works at Sukkur and Rohri were visited by His Excellency the Governor of Bombay and the Honourable Member (Finance Department) in December 1925 and by the Honourable Member (General Department) and the Chief Engineer for Irrigation and Secretary to Government, P. W. D. in November 1925.

Withdrawals of water from the river Indus and its tributaries

140. The Government of India have given an assurance, as *mutatis mutandis* they have the Punjab Government, that no new major irrigation project in the Punjab will be sanctioned until the Government of Bombay have received timely notice and full information as regards the scheme in hand and have been given the opportunity to represent their case should such project appear to them to be unfavourable to their interests. In accordance with this assurance the following projects were referred to the Government of Bombay for opinion :—

1. Experimental Thal Canal Project

	Acres
(1) Gross area commanded	232,000
(2) Area commanded and culturable	....
(3) Annual irrigation provided	133,000
(4) Kharif area out of (3)	44,333
(5) Rabi area out of (3)	88,667
(6) Discharge in kharif	750 cusecs
(7) Discharge in rabi	

2. Thal Canal Lesser Project, 1925

	Acres
(1) Gross area commanded	2,191,381
(2) Area commanded and culturable	1,441,456
(3) Annual irrigation provided	1,080,000
(4) Kharif area out of (3)	432,000
(5) Rabi area out of (3)	648,000
	Cusecs
(6) Discharge in kharif	6,355
(7) Discharge in rabi	3,085

Both the projects have been objected to by the Government of Bombay

7. Miscellaneous

141. No levelling or topographical survey work was carried out by the Survey of India Department during the year under report.

142. *Plantations.*—Existing plantations on canals and bunds were well cared for. The work of planting new trees in some divisions was continued.

143. *Irrigation of Cotton.*—No Egyptian cotton was sown in the Indus Left Bank Circle during the year. The following table shows some details regarding the waterings given to indigenous cotton :—

Name of Division	Lift lands		Flow lands		Date of last watering
	No. of waterings	Intervals between	No. of waterings	Intervals between	
Hyderabad Canals ..	7 to 9	..	..	..	20th September 1925.
Fuleli Canals	5 to 8	12 to 25 days	..	..	21st September 1925.
Eastern Nara	..	..	4 to 7	..	12th October 1925.
Northern Jamrao Canal ..	8	..	5 to 9	..	Flow on 5th December 1925. Lift on 24th October 1925.
Southern Jamrao Canal ..	6 to 8	..	5 to 8	..	Lift from 10th October 1925 to 7th November 1925 and flow from 26th September 1925 to 14th November 1925.

III. Deccan and Gujarat

1. Northern Circle

144. *General remarks.*—The rainfall during the year was much below the average. In consequence of this there was a shortage of rice and other crops and scarcity of fodder.

(*i*) *Works for which capital accounts are kept*

Hathmati and Khari Cut Canals

145. The monsoon commenced at the beginning of June and lasted till the middle of August.

The rainfall gauged at Ahmedabad and Prantij during the year was 21·66 and 12·64 inches against the average of 27·29 and 28·45 inches, respectively, for the last 30 years including the year under report. At Bareja, which is the centre of the Khari cut canal irrigation, a heavy downpour of rain was recorded on the 14th and 15th July 1925, amounting to 10·69 inches. On the Prantij side, there was no much flow to fill the tanks and reservoirs, while under the Khari cut canal with the heavy rainfall on the 14th and 15th July, most of the local tanks were filled nearly to full supply level and people transplanted rice on a large scale.

146. The Hathmati river was twice in flood, once on 30th June and for a second time on 15th July, the maximum depth of flood over the weir being 0·8 feet and 1·7 feet, respectively. The Hathmati canal began to flow from the 14th June. Owing to the unsatisfactory start of the monsoon, people did not sow on a large scale and hence only 99 acres were irrigated under this canal in kharif season, of which 54 acres were cotton, 17 acres jowar and 16 acres rice. Out of 90 cusecs of supply admitted into the canal, 67 cusecs were let down for use on the Khari cut canal and 23 cusecs including the loss on account of leakage and absorption were utilised on the Hathmati canal. The flow in the canal having dropped to under 30 cusecs on the 23rd September, it was after that date run intermittently. In the rabi season only 10 acres were irrigated.

147. The Khari river had only one flood on the 14th July and the total flow was 1154 cusecs, which lasted only for a few hours. The water admitted into the Khari cut canal was sent down the Chandola tank, filling the latter only up to R. L. 130·00, the level of the sill of its lowest outlet. Cultivators grew rice under this canal on a large scale, *i.e.*, about 8,000 acres with the help of the heavy rainfall on the 14th and 15th July. As no rain fell subsequently, water had to be let down from the Bokh reservoir and the Hathmati canal through the Bhujwa channel. One watering was given from this flow to 2,688 acres in 22 villages and by the 15th September before the second watering could be commenced the reservoir was empty. The Hathmati canal supply also failed by about the same date. The area irrigated on this canal was 2,688 acres excluding 40 acres irrigated under the Kalambandi villages.

148. No irrigation was done under the Chandola tank and the Wasai reservoir as there was no water in them.

149. Besides himayat deduction remission of Rs. 1,298 was granted on account of failure of crops.

150. The total area irrigated and the gross assessment on the Hathmati and Khari cut canals during the year was 2,838 acres and Rs. 16,140 against 4,654 acres and Rs. 29,726, the average.

Tanks in the Kaira Collectorate

151. The area irrigated and the gross assessment on the Wangroli, Tranza Nagrama, Savli and Sahiat tanks compare with the average, as under :—

Name of tank	1925-26		Average	
	Area irrigated	Gross assessment	Area irrigated	Gross assessment
	Acres.	Rs.	Acres	Rs.
Wangroli	1,161	7,426	496	2,296
Tranza Nagrama	8	1,374	2	943
Savli	376	2,870	842	3,417
Sahiat	976	4,782	305	1,897

Owing to deficient rainfall in the year, all the tanks filled only partially except the Tranza Nagrama tanks, which remained empty. The replenishment received in the tanks was not sufficient due to failure of rains in the latter part of the monsoon. There was no hot weather irrigation as there was hardly any surplus water, the previous year being also one of scanty rainfall.

152. The storage of the above tanks was utilised in irrigating the kharif crops, consisting mainly of rice. No water was available for the rabi season. A little lift irrigation was done in the kharif and rabi seasons from a well in the bed of the Tranza tank. All the above tanks were maintained in good order during the year under report at a cost of Rs. 15,082.

153. *Futelao Tank.*—The total run-off into the Futelao tank during the year was 0·07 million cubic feet against 56 million cubic feet, the total capacity. The little water in the tank was ultimately lost in leakage, evaporation and absorption, and hence there was no irrigation under this tank either in the kharif or rabi season. The rainfall measured during the year was 14·50 inches. The miscellaneous receipts, including the tank bed cultivation, etc., amounted to Rs. 73 and the tank as well as the canals were maintained in good order at a cost of Rs. 1,066.

(ii) Works for which capital accounts are not kept

154. *Khari Sluices.*—There was only one flood in the Khari river on the 14th July 1925, which let down about 927 cusecs below the Raipur weir. As there was no subsequent rain, the rice crop practically failed completely.

155. Owing to insufficient supply in the Hathmati canal, no water could be let down for the protection of the land under the "sluices." The water in the Goblaj and Chanindra reservoirs, which had received a supply from the heavy rain in July 1925, was however useful in saving the area under them. The Bherai reservoir was empty throughout the year.

156. Irrigation of 40 acres was done in Dathal, Pinglaj, Kathwada, Naika and Malarpura villages under the Khari sluices.

157. *Muwalia tank.*—The run-off in the Muwalia tank was 49·44 million cubic feet only during the monsoon as the rainfall was scanty. However, in the preceding year, the tank had filled to its full supply level and as there was no heavy demand for water then, the contents in the tank at the commencement of the monsoon were 105·86 million cubic feet, which raised the total supply in the tank to 155·30 million cubic feet during the year under review. The storage was utilised in irrigating kharif crops for which the demand for water was high as the year was of scanty rainfall. The area irrigated during the kharif season was 171 acres against 45 acres of the previous year. In the rabi season too the demand for water was great, the area irrigated being 646 acres against 494 acres of the previous year. The tank is of great importance as a protective work in years of scarcity following years of good rainfall. It gets filled to its full supply level in a good year, the contents lasting at least for two subsequent years, if used economically. The total area irrigated during the year was 817 acres and the gross assessment Rs. 2,535 against 843 acres and Rs. 2,702 respectively, the average. The miscellaneous revenue, inclusive of tank bed cultivation and Rs. 800 realised from water supplied to the Bombay, Baroda and Central India Railway Company's Loco Shops at Dohad, amounted to Rs. 1,815 against Rs. 802 in the preceding year. The tank with its dam, canal and distributaries was maintained in good condition at a cost of Rs. 4,441.

158. *Old tanks.*—Improvements to two tanks in the Ahmedabad Division and ten tanks in the Kaira and Panch Mahals Division and repairs to ten tanks in the Ahmedabad, twenty-five in the Kaira and Panch Mahals and forty-three in the Surat and Broach divisions were executed during the year at a total cost of Rs. 29,321 and Rs. 47,214, respectively.

159. The following important works were in progress :—

	Expenditure during the year Rs.
(1) Improvements to Nawa bund at Kerala, Taluka Dholka	1,235
(2) Constructing the tank at Pania, Mahal Jhalod ..	8,498
(3) Constructing the Chharchhoda Ambli Tank, Taluka Dohad	14,994
(4) Repairs to Bai tank at Kanera, Taluka Matar (completed)	3,033

Tanks and bunds in the Kaira and Panch Mahals Collectorate

160. Though the small irrigation tanks in Kaira and Panch Mahals Collectorates filled only partially due to deficient and badly distributed rainfall during the year, yet there was some extra irrigation amounting to 1,162 acres in the Kaira Collectorate and 406 acres in the Panch Mahals Collectorate, excluding the area assessed to himayat, and the revenue realised thereby amounted to about Rs. 4,652 in both the Collectorates.

161. *Drainage channels.*—The drainage channels in the Ahmedabad, Kaira and Panch Mahals and Surat and Broach divisions were maintained in good order at a cost of Rs. 7,274, Rs. 3,943 and Rs. 5,358, respectively.

162. *Protective bunds.*—The following bunds constructed in the past with a view to protect the cultivable lands from the inroads of the sea worked satisfactorily :—

(1.) Bunds at Wagrej and Birji in Bulsar taluka of the Surat District.
(2.) Bund at Lakhigam in Wagra taluka of the Broach District.
(3.) Bund at Kadodra in Wagra taluka of the Broach District.
(4.) Bund at Harinagar in Wagra taluka of the Broach District.
(5.) Bund at Gandhar in Wagra taluka of the Broach District.
(6.) Bund at Islampur in Jambusar taluka of the Broach District.
(7.) Bund at Nada in Jambusar taluka of the Broach District.
(8.) Bund between Nada and Devla villages in Jambusar taluka of the Broach District.

163. During the year under report the following new as well as incomplete works of the last year, were taken in hand and all of them completed at the total cost noted against each :—

	Expenditure during the year Rs.
(1.) Protective bund at Dehej in Wagra taluka, Broach Collectorate	1,200
(2.) Raising the protective bund at Islampur, Taluka Jambusar, Broach Collectorate	1,479
(3.) Raising the bund between Nada and Devla villages in Jambusar Taluka, Broach Collectorate ..	5,357
(4.) Providing masonry sluices in the bund between Nada and Devla villages in Jambusar Taluka, Broach Collectorate	1,489
(5.) Protective bund at Suwa, Taluka Wagra, Broach Collectorate	5,300

164. *Reclamation works.*—Reclamation bunds existing near Hansot and Asarsa villages in the Broach District continued to assist gradually in reclaiming the salt lands by siltation.

165. During the year, there was no extraordinary high tide in the sea as in the years 1920 and 1924 and practically no damage was done to the existing bunds except washing of side slopes to a slight extent by the periodical high tides during Summer and the same were made good from the current repair grants.

166. The protective and reclamation works in the Surat and Broach division were maintained and repaired at a total cost of Rs. 9,200.

2. Central Circle

General remarks

167. This Circle has only a few irrigation works of importance, *viz.*, the Ekruk tank, the Jamda canals and the Krishna canal. The rainfall in the catchment of the tanks and canals in the year 1925 was not as good as that of the previous year.

(*i*) *Works for which capital accounts are kept*

Ekruk Tank

168. The Ekruk tank supplies water to the town of Sholapur, the Mills and the G. I. P. Railway and also for irrigation. Under unfavourable conditions of replenishment the tank is not able to meet all the demands made on it and consequently investigations are in hand for an additional storage reservoir to supplement the supply. The tank irrigated 3,741 acres as against 2,899, the average. The gross assessed revenue amounted to Rs. 1,21,002 against Rs. 1,37,662 the average. The increase in irrigation resulted from good storage. In spite of the increase in the area irrigated however there was decrease in the revenue due to less demand for water by the Sholapur Mills owing to wells having been dug by some millowners as a supplementary source for their water supply.

169. *The Jamda Canals.*—The area irrigated on these canals fell from the average of 1,400 acres to 1,000 acres. The area under irrigation is decreasing owing to the diffidence of the irrigators to take more canal water as the supply being dependent on the Chankapur tank is uncertain. Cotton and foreign ground nuts are supplementing other crops as these require little or no irrigation and pay well.

170. *The Krishna Canal.*—The existing Khodshi weir is a masonry structure built across the Krishna river. The capacity of the storage has been found insufficient to supplement the discharge of the river in the hot weather and to irrigate adequately the crops depending on the canal. Investigations are in hand for a pick-up-weir across the river Koyna and a feeder channel from that weir to the Khodshi weir for improving the supply.

171. The area irrigated on the canal was 12,836 acres against the average of 8,259 acres, and the gross revenue was Rs. 85,031, as compared with Rs. 68,039, the average.

172. *Other Works.*—The areas irrigated on the Ashti, the Pathri and the Mhaswa tanks showed increases as compared with their averages, as good storage was available in the case of the first two works and to insufficient and uneven distribution of rainfall during the rabi season, which caused a keen demand for water in the case of the last named work. There were corresponding increases in the gross assessed revenue except on the Ashti tank as no amount was realised for the contour lands which were under water and could not therefore be leased out for cultivation. The slight increase in irrigation under the Yerla river irrigation works was due to the famine conditions obtaining in the tail villages and the consequent supply to the fodder crops. There were decreases in the figures of area irrigated and revenue under the Shahada Channel and the Lower Panjhra river works due timely rainfall and consequent less demand for canal water.

173. *Total area and assessment.*—The area irrigated on all the works was 34,875 acres and the gross revenue Rs. 3,28,006, as against the average of 30,789 acres and Rs. 3,39,783 respectively.

(*ii*) *Works for which capital accounts are not kept*

174. The total expenditure on extensions and improvements and maintenance and repairs to bandharas, etc., in Satara, East and West Khandesh Districts was Rs. 6,858 and the area irrigated was 8,543 acres.

3. Deccan Irrigation Circle

General Remarks

175. The monsoon of 1925 was below the average. The rabi rains during the year 1924 being deficient the demand for water during that season was very keen on both the Nira Left Bank and Mutha Canals. To meet the demand both the lakes, *viz.*, Lake Whiting and Lake Fife, had to be drawn upon earlier than usual. The supply available in Lake Fife for the hot weather of 1925 was therefore not entirely satisfactory, and the perennial area had to be restricted. In Lake Whiting at Bhatgar ample supply was however available, and rabi water was very freely given. In the catchments of Lake Whiting and Lake Fife the rainfall was below normal and that in the canal tracts deficient. Consequently the demand for monsoon water was very keen, especially in the tail portion of the Nira Left Bank Canal. There was also a heavy demand for rabi water. On the Mutha Canals, too, especially in the tail sections, the demand for both monsoon and rabi water was very keen and was complied with as far as practicable.

176. On the Godavari and Pravara Canals, rainfall conditions in the year under report were equally poor. On the Godavari Canals the monsoon commenced about the end of May 1925 with good general rainfall but the partial failure of rain in the months of July, August and September produced a heavy demand for rabi irrigation. The rainfall in November decreased the demand for canal water to certain extent, but the rains were not enough to bring the crops to maturity and some late applications for rabi had to be sanctioned to save the crops from ruin. On the Pravara Canals the year under report on the whole was not altogether favourable. The rainfall conditions were very nearly the same as on the Godavari. There was an ample supply of water in the storage reservoir at Bhandardara, and applications for seasonal and perennial crops were met in full.

177. The conditions of the country and people in general has improved greatly since the construction of the Godavari and Pravara Canals in the Ahmednagar District. The labouring classes earn good wages, and on account of the scantiness of the local supply labour is attracted from outside to the sugarcane areas and finds employment the whole year round. The rates for labour remain high owing to the concentration of the demand in particular seasons and localities.

178. Some experiments are being continued on the Nira and Pravara Canals in entrusting the cultivators with the distribution of water to their fields. The most important of these experiments is being carried out on an area of about 450 acres on the Nira Left Bank Canal at Malegaon. The progress of these experiments is being watched with interest, but there seems little hope that sufficient local co-operation will be forthcoming to render any important development possible at present.

179. An attempt has been made to start Local Irrigation Committees on some of the distributaries of the principal irrigation systems. The response has however been very meagre. After considerable efforts and persuasion a few such committees have been formed, the working of which is being carefully watched. The main draw-back to the formation

and success of such committees is the unwillingness of the people to combine together and undertake the responsibilities and duties of management and control.

(i) Works for which capital accounts are kept

(a) Works in operation

180. *Nira Left Bank Canal and Shetphal Tank.*—This system forms part of a scheme which was one of the pioneer irrigation works in the Deccan, and irrigates lands on the left bank of the Nira River. The old Bhatgar dam which was built for it is now submerged in Lake Whiting formed by the new Lloyd dam.

181. The original canal system consisted of—

(1) a storage reservoir at Bhatgar impounding 5,313 million cubic feet of water;

(2) a pick-up weir at Vir on the Nira river about 19 miles downstream from Bhatgar; and

(3) a canal about 100 miles long.

The canal, which protects a tract subject to extremely precarious rainfall in the Poona District, commands a gross area of 2,74,447 acres of which some 60,000 to 80,000 acres are irrigated annually. The canal was designed to carry 450 cubic feet per second, but the masonry works were built to admit of the discharge to be raised to 760 cubic feet per second, in order to provide for future enlargement of the canal. Irrigation on the canal was started in the year 1885. For a considerable time only seasonal crops were grown and the revenue earned by the canal was only about 0·7 per cent. on the capital cost, but in the early years of the present century sugarcane cultivation came into vogue and it became necessary to adapt the water distribution arrangements to the new conditions. A great improvement was effected by the introduction of what is known as "the block system," which was started in the year 1904. Under this system leases or contracts of six years' duration are made for the supply of water at a fixed rate per acre. The next advance was made in the year 1913, when 'bund rules' were introduced in order to improve the method of distribution and prevent waste of water. These rules had an immediate and very beneficial effect on the economical running of the canal. A further improvement in irrigation methods, which has had a valuable effect on the efficiency and economy of distribution, is what is known as 'unitisation,' that is the sub-division of lands into small units of half an acre.

(4) *Shetphal Tank.*—This tank is situated at the tail of the canal and is used for the purpose of storing the surplus monsoon flow in the river which would otherwise go to waste, and utilising the water so stored during the dry season. It is formed by an earthen embankment two miles long, with a maximum height of 66 feet, and relies for its supply almost entirely upon the canal, the flow-off from its own catchment being negligible. Its capacity is 592 million cubic feet.

182. The capital outlay on the whole system is Rs. 66·45 lakhs and the scheme is financially the most remunerative of the larger protective

irrigation works now in operation in the Deccan. It has enormously benefited a tract which in previous years suffered seriously from drought and famine.

183. During the year this system irrigated about 83,000 acres, yielding a gross revenue of about Rs. 8,22,000 or a probable net revenue of about Rs. 5,61,000 which works out to 8 per cent. on the capital invested as compared with the average of 7 per cent.

184. The block system or 'perennial block system' already mentioned above is a form of long term water lease first introduced on this canal and now being extended to other systems. In return for first claim on the supply of water for the irrigation of sugarcane on one-third of the area concerned and for other crops during the monsoon and rabi seasons on the remaining two-thirds of the area, the lessee binds himself to pay a fixed rate per acre annually, whether water is taken or not. There are at present 18,400 acres under block agreements on the canal and on the Shetphal tank about 1,200 acres.

185. Another form of long-term agreement in vogue on this and other canals is the 'eight months' lease', which mainly differs from the perennial block system in that it guarantees water during the monsoon and rabi seasons only. Yet another modified form is adopted on some canals and applies solely to rabi irrigation.

186. The area of eight months and rabi leases on the Nira Left Bank Canal was about 28,000 acres and that on the Shetphal tank was about 2,800 acres.

187. The work of remodelling the Nira Left Bank Canal which forms part of the Nira Valley development project was in progress. The total expenditure on this work during the year under report amounted to Rs. 1,94,234. The work carried out during the year chiefly consisted of earthwork in connection with raising and strengthening of the banks.

188. *Mhaswad Tank.*—This irrigation tank is formed by an earthen dam across the Man river, and has a storage capacity of 2,600 million cubic feet. It is situated on the eastern border of the Satara District but irrigates lands in the Sholapur District. Though the capacity is considerable, the supply of water is not very reliable. The area irrigated during the year was about 6,300 acres yielding a gross revenue of about Rs. 62,600 and realising a return of about 2 per cent. on the capital invested. There being no water in the tank till August 1925 no water could be given to eight months' crops.

189. Proposals for remodelling this work so as to ensure a discharge of 100 cusecs in order to supplement the discharge at the tail portion of the Nira Right Bank Canal are under consideration, and ultimately this system will form a part of the Nira Right Bank Canal.

190. *Godavari Canals.*—This system is the first of the important irrigation works undertaken in the Central Deccan for the protection of areas liable to famine. It was started in 1907 and completed in 1915-16 at a cost of a little over one crore of rupees. The system comprises—

(1) a storage reservoir, called Lake Beale on the Darna river.

(2) A pick-up weir at Nandur Madhmeshwar on the Godavari river.

(3) Two canals, the Godavari Right and Left Bank canals taking off from the pick-up weir.

The Right Bank Canal, which is the more important of the two is 69 miles long and serves the nothern tracts of the Ahmednagar District. The Left Bank canal is 48 miles long and irrigates lands in the south of the Nasik District and the north of the Ahmednagar District. The maximum designed discharges of the Right and Left Bank canals at the head are 384 and 228 cusecs, respectively.

191. The development of irrigation on these canals is being realised up to expectations. Sugarcane cultivation is steadily advancing, the total area of the latter crop irrigated during the year being about 7,500 acres.

192. The area of all crops irrigated by this system was just over 40,000 acres, yielding a gross revenue of about Rs. 5,46,000 or a probable net revenue of about Rs. 2,51,000, which represents a return of about 2½ per cent. on the capital invested as compared with the average of about 3 per cent.

193. The necessity for additional storage for these canals is becoming apparent, and preliminary investigations are being made.

194. *Mutha Canals and Matoba Tank.*—This irrigation scheme consists of :—

(1) a storage reservoir at Khadakwasla called Lake Fife impounding 3,950 million cubic feet and

(2) the Mutha Right and Left Bank canals.

The canals take off from the flanks of the dam itself. In this respect the scheme differs from the other large irrigation schemes, in which the canals are supplied from pick-up weirs situated at considerable distances down the river from the storage dams. The Right Bank canal is 70 miles long and the Left Bank canal 18 miles. The capital cost of the scheme is about Rs. 65 lakhs.

195. The system irrigated about 24,500 acres during the year under report, and earned a gross revenue of about Rs. 3,52,000 including earnings by the sale of water to Poona Cantonment and City ; the probable net revenue, *viz.*, Rs. 2,05,000 represents a return of 3 per cent. on the capital invested. The area of eight months or rabi leases under the Mutha canals and Matoba tank was about 289 and 1,148 acres, respectively, during the year under report.

196. As Lake Fife is insufficient to meet the increasing demands for water supply for Poona and perennial crops on the canals, preliminary proposals for remodelling the system and providing lining for a portion of the canal have been approved by Government and a project is under investigation for increasing the capacity of the lake, either by raising the present dam or by constructing subsidiary storage dams. Proposals are also under consideration for enlarging the Mutha Right Bank canal, there being a very keen demand for extension of irrigation in the Mutha Valley.

197. The Matoba tank is a tail tank receiving its main supply from the Mutha Right Bank canal during the monsoon months.

198. *Kadwa River Works.*—The Waghad tank, with an earthen dam having a maximum height of 96 feet, is the main feature of this small scheme and supplies the Palkhed, Ojhar Tambat and Wadali canals. The area irrigated during the year was about 6,000 acres, the gross revenue about Rs. 46,500 and the probable net revenue about Rs. 9,200. This scheme needs increased storage and the canals require some remodelling. Investigations of a preliminary nature are being made.

199. *Girna River Works.*—This is a small irrigation system in the Nasik Collectorate, comprising a storage reservoir called Chankapur tank and the Girna Left Bank Canal about 19 miles long.

200. The total area irrigated during the year was 8,000 acres and the gross assessed revenue was over Rs. 40,200; the probable net revenue will be about Rs. 3,400.

(b) Works under construction

201. *Pravara River Works.*—This system comprises :—

(1) a storage reservoir called Lake Arthur Hill on the Pravara river at Bhandardara, 29 miles by road from Igatpuri;

(2) a pick-up weir at Ojhar 53 miles down the river; and

(3) two canals named the Pravara Right and Left Bank canals, 33 miles and 48 miles long, respectively, taking off from the Ojhar weir.

202. Lake Arthur Hill works which were started in 1911, have already been completed. The catchment area of the reservoir is 47 square miles, and the whole of the catchment is in the Ghats, which assures a good run-off. The masonry Dam now known as the Wilson Dam, is ready and with the present level of waste-weir sill, 260 feet level, it can impound 10,086 million cubic feet of water and the storage can be increased to 12,090 million cubic feet, at 270 feet level, by the erection of gates over the waste weir sill, when deemed necessary. The expenditure incurred during the year on "works" was about Rs. 96,000. The possibility of generating hydro-electric power at the Bhandardara Dam or at Randha Falls a little lower down the river, where a natural fall of about 200 feet exists, has been considered in full detail. The difficulty however lies in the impracticability of finding any consumers, commercial or otherwise, who would accept electric power without a guarantee of a continuous supply which is not possible owing to the primary and paramount commitments as regards irrigation.

203. Silt has accumulated above the pick-up weir at Ojhar to such an extent that the basin does not contain even a full day's supply. It is, therefore, proposed to increase the storage to a three days' supply and take measures to prevent further accumulation of silt. A special officer has been appointed for this work and also for investigating suitable sites for additional storages in the Nasik and Ahmednagar Collectorates.

204. The construction of both the Pravara Right and Left Bank canals has been completed with the exception of a few sets of quarters for the

canal staff which are in progress. The canals are now in full operation, and, with the storage at Lake Arthur Hill completed, a full supply will be available which is expected to bring a greater area under irrigation than has hitherto been possible. The gross commanded area under these canals is 228,720 acres, and they irrigate lands in Sangamner, Kopargaon, Rahuri and Newasa Talukas in the Ahmednagar Collectorate. The designed discharges of these canals at head are 534 and 150 cusecs, respectively, and at tail 39 and 81·79 cusecs, respectively.

205. The completion of the canals has brought about a rapid increase in irrigated area. A large sugar factory, owned by the Belapur Company and situated near Belapur Railway Station, started operations in 1921 and the Company's area of sugarcane has risen from 550 acres in 1921-22 to 1,445 acres during the year under report. This concern will eventually have about 2,000 acres under sugarcane every year out of about 7,400 acres of gross area which the Company have acquired. The area of all crops irrigated by these canals during the year was over 49,000 acres of which about 8,800 acres were under sugarcane as against 37,000 acres in the previous year. The gross revenue was a little over Rs. 6,36,000, and the probable net revenue will be about Rs. 4,79,000.

206. The provision of a balancing tank of sufficient capacity at the head of the canals is receiving careful attention. It is probable that modification of the weir and the installation of syphon spillways will provide the best solution. Experiments are in progress with a full sized syphon and also a small scale model of the pick-up weir the results of which will be considered before deciding on the final design.

207. *The Lloyd dam at Bhatgar and the Nira Right Bank Canal.*—This irrigation system, together with the Nira Left Bank canal, which will form an integral part of the completed system, will be far the largest so far constructed in the Bombay Deccan. The canal passes through the northern tracts of the Satara Collectorate and the Phaltan State, but it will mainly benefit the western portion of the Sholapur Collectorate, a tract notoriously liable to famine.

208. The project comprises the construction of a large masonry dam known as the Lloyd dam at Bhatgar. This dam has taken the place of the old Bhatgar dam, a much smaller structure constructed some 40 years ago, and will impound 24,200 million cubic feet of water. The new lake will supply the old Nira Left Bank canal as well as the new Nira Right Bank canal, both of which take off from the pick-up weir on the Nira River at Vir, some 19 miles below Bhatgar. The Right Bank canal will be 108 miles long and end near Mohod in the Sholapur Collectorate.

209. The works were started in 1912. The improvement made in the progress of construction since the close of the war has made it possible to commence irrigation from the new Right Bank canal during 1924-25. A volume of nearly 17 lakhs of cubic feet of masonry was added to the dam during the year, bringing the total done up-to-date to about 211 lakhs and leaving a balance of about 4 lakhs to be done. The dam will be completed in the official year 1926-27, by which date the first 90 miles of

SLUICES AT THE LLOYD DAM, 1926.

the canal should also be approaching completion. Practically all deep cuttings and high banks up to mile 106½ and all masonry works up to mile 97 of the canal have been completed. The progress on distributaries and branches is satisfactory and in accordance with the programme. The distribution system is being designed on up-to-date principles and the latest types of measuring devices are being provided at distributary heads and also at frequent intervals on the channels.

210. The whole perennial area under the canal has been carefully surveyed and soil classification carried out before designing channels while areas unsuitable for perennial crops have been determined.

211. A large Venturi meter has been constructed to measure and record the discharge of the main canal at its head, and standing-wave meter flumes are to be constructed at miles 48 and 79 to measure the discharges at Phaltan State and Sholapur District boundary and at the end of the perennial section of the canal.

212. The total expenditure incurred on 'works' during the year amounted to about Rs. 23¼ lakhs.

213. The storage at Bhatgar provides sufficient head and discharge to generate electrical energy up to more than 3,000 electrical horse power at the foot of the dam. Part of this energy is already being utilised for driving the machinery used for construction, such as mortar mills, stone crushers, workshop plant, etc., and for lighting and other purposes. The question of utilising this power for the generation of electricity after the construction of the dam is finished has been gone into exhaustively, but for similar reasons given above in connection with the Wilson dam it is found impracticable to guarantee a continuous supply for use of the power commercially. Some of the plant will probably be used for providing electric power for future construction work of the proposed Vir dam

214. During the year under report, the area irrigated was about 14,800 acres, yielding a gross revenue of Rs 74,700.

215. As the storage provided by the Lloyd dam at Bhatgar will not suffice for the full development of irrigation on the two canals, an amplified scheme, *viz.* the Nira Valley Development project, which provides for widening and remodelling the Nira Left Bank canal and for building a new dam at Vir to supplement the supply from Bhatgar has been sanctioned by the Secretary of State. The additional works will cost Rs 127½ lakhs and will enable the canal to show a greatly improved return on capital outlay. The work of remodelling the existing Nira Left Bank canal has been put in hand so as to take full advantage of the extra storage at Bhatgar pending development of irrigation on the Nira Right Bank canal.

(ii) Works for which capital accounts are not kept

216. These include numerous bandharas, *i.e.*, weirs built across small streams having a good supply of water to raise the level of the water sufficiently to enable them to command the lands to be irrigated. In all there are about 300 of these small works in the Nasik Collectorate

alone, and a large number also exist in West Khandesh. The outlay on repairs and extensions and improvements of these works and small village channels amounted to Rs. 33,000 as compared with the average of Rs. 36,000.

217. The supply of water from these bandharas was inadequate during the year and the agricultural results suffered in consequence.

4. Southern Circle

(i) *Works for which Capital Accounts are kept*

218. *Gokak Canal.*—The Gokak canal is the only important irrigation work in the Southern Circle. It consists of a weir across the Ghataprabha at Dhupdal in the Belgaum District and 16 miles of main and branch canals. During the year a temporary movable crest of teak planks 4 feet high has been provided above the permanent crest so as to be removable before the monsoon. This has a decided advantage over the previous arrangement in that it is possible now to conserve much more water at the beginning of the cold weather and thus to bring more area under rabi cultivation.

219. The water level of the Dhupdal storage reservoir on 1st April 1925 was 14·18 feet. It gradually fell till the lake became dry on 21st April 1925. The reservoir commenced to get replenishments from 6th June 1925 and overflowed on 24th June 1925. The placing and fixing of the temporary wooden crest being completed by the 20th September, the lake gradually filled up to the top of the extra Full Supply Level (R. L. 26·06) by the 29th September 1925. Since that date practically no replenishment was received and by 31st March 1926 the level was 17·90 feet.

220. The cotton mills at Gokak receive their supply of water as usual for which they have to pay to Government Rs. 14,313 annually. Owing, however, to the shortage of rainfall during the rabi season the cold weather discharges of the Ghataprabha and Hiranyakshi rivers ceased much earlier than usual and consequently there was shortage of water in the reservoir. The cotton mills had, therefore, to be paid compensation of Rs. 1,309-2-0 according to their agreement. Thereafter water was given regularly as required till the end of March 1926.

221. The Madras and Southern Mahratta Railway Company paid Rs. 371-10-0 for water supplied to it during the year at the rate of one anna for each engine watered and two annas for water supplied to the passengers per day.

222. The total area irrigated during the year under the Gokak Canal was 11,854 acres as against 12,774 acres in the previous year and 10,379 acres, the average. The decrease is due to more rainfall in the kharif season of the year under report. The increase on the average is due to the gradual increase in the rabi area during the past three years owing to the failure of rabi rains.

223. The water rate assessed during the year was Rs. 76,728 as compared with Rs. 61,866 of the last year and Rs. 51,383, the average.

The increase over the figure of the past year is due to increase in the rabi area and that over the average to the general increase in the area irrigated.

224. *Dharma Canal.*—The monsoon of the year was favourable. Water was admitted into the canal on 24th June 1925 and the canal ceased to flow on 26th July. Water was again let into the canal on 31st July 1925 and the canal ceased to flow on the 26th November 1925. Crops under direct irrigation of the canal and also those under the tanks fed by the canal were in good condition.

225. *Other Tanks.*—The remaining works are a few small tanks irrigating from 50 to 600 acres and are situated chiefly in the Dharwar Irrigation Division.

226. *Total area irrigated and assessment.*—The total area irrigated on all the works was 19,883 acres and the gross assessed revenue Rs. 1,10,593 against 18,482 acres and Rs. 85,626 the average respectively.

(*ii*) *Works for which capital accounts are not kept*

227. Most of the irrigation works under this head are in the Dharwar Irrigation Division. They supplement rainfall whenever there are long breaks in the monsoon and irrigate rice. 110 tanks were repaired during the year at a total cost of Rs. 54,544, the average expenditure during the previous triennium being Rs. 56,197. The total area irrigated by these small tanks was 95,081 acres and the irrigation share of the consolidated assessment amounted to nearly Rs. 3,14,896.

5. Scientific Works

(*a*) *Engineering questions that have arisen*

228. Observations to ascertain losses by evaporation and absorption were made by means of iron tanks in certain tanks and reservoirs and the results are published in the " Annual Report of Supplies of Water available for irrigation works, etc., for the year 1925."

(*b*) *Special Irrigation Division*

229. The executive charge carries out experiments and research work in connection with the many problems met with in the scientific development of Deccan irrigation.

230. The principal subjects under investigation are dealt with below :—

Land Drainage.—It has now been proved that water-logged lands can be drained and reclaimed at a comparatively small cost by a system of permanent drains, combined, in the first few years, with the restoration of the physical texture of the soil by means of surface-washing or ' leaching ' of the salts in the case of salt-affected lands. The texture of the soil is revised by suitable initial plantation, green manuring, admixture of course vegetable matter, etc. Three such drainage and reclamation schemes have been completed covering an aggregate area of 368 acres. The total cost comes to Rs. 46,421, the average cost per acre being about Rs. 126. About 300 acres are under successful irrigation, and the land, formerly worth little or nothing is now worth about Rs. 500 per acre. Co-operative financing of drainage schemes has been found practically

impossible, and the solution appears to be for the work to be done by the State and a cess for the increase of irrigation facilities to be imposed.

231. The following land drainage schemes are in progress :—

	Estimated cost Rs.
(1) Malegaon Drainage Scheme	37,500
(2) Hol Murum Karanja Scheme	79,600
(3) Kopargaon Drainage Scheme	38,800
(4) Khandala-Nandur Drainage Scheme	24,800
(5) Manjri Drainage Scheme	10,000

In the case of the drainage scheme near Baramati, all the badly damaged area was acquired by Government and this, together with the old experimental area, totals 161 acres. Most of this area is now reclaimed.

232. *Soil Classification, etc.*—A staff has been trained in soil classification and sub-soil survey work and large areas have been classified and so the time is ripe for an active policy of land drainage. The areas classified during the year on the Nira Left Bank canal totalled 50,000 acres. The cost of the soil survey worked out to 25 acres to the rupee. Branch No. 1 and Minor No. 7 of the Nira Right Bank canal were surveyed during the year under report. The area surveyed was 57,000 acres. The classification of soft murum areas was also taken up on Branch No. 1 and will be completed next year. On the Pravara Canals, blocks 12 to 16 of the Left Bank and blocks 9 and 10 of the Right Bank were classified during the year under report, the areas being 35,900 acres and 12,400 acres respectively. The cost of classification worked out to 24 acres to the rupee. Soil classification of the Mutha Right Bank canal area was continued, and the area of 58,000 acres from Vervand to Shirpur was surveyed, thus completing the survey of the Mutha Right Bank canal area. The areas suitable for various crops under command of the canal are being worked out on the information obtained from the soil surveys, well water levels and conductivities.

233. The peculiarities of soil and subsoils in places where good crops are obtained and in places where the soil is incapable of growing any crop were investigated and compared, and the results obtained corroborated last year's experience, namely that crops respond primarily to the surface soil conditions and are not greatly affected by sub-soil conditions. It was also found that a good deal of coarse soil area was underlaid by soft murum capable of being turned into good soil, rendering possible an increase in the areas suitable for cane. A survey of such soft murum areas was started.

234. *Soil Physics.*—It has been observed that a deflocculated soil with no salt appearing on the surface, does not give good crops. In order to find out the cause, samples of the surface soil and subsoil were analysed mechanically. The results showed that cane failed for the reason that the high clay contents in the surface soil prevented good air circulation and obstructed drainage. With a view to improving such deflocculated soils

(3) Spillway in action.

various types of fertilizers were tried on a small scale, a fixed amount of each being given to equal sized plots and the results noted.

235. *Crop Experiments.*—Outturn experiments of sugarcane on various types of soils were continued during the year on the Pravara and Godavari canals, and the results are being tabulated.

236. A short method of analysing the soluble salts in well water was evolved, furnishing the required data in one-third the time and at less cost than required for analysis by the standard method.

237. *Well Observations.*—Observations of levels of water in wells are being made in the areas irrigated by the principal canals as well as in those likely to be irrigated in the near future.

238. *Aquatic Weeds.*—The intensity and distribution of the different varieties of aquatic weeds in different canals were observed. It is found that the greater the turbidity the less the weeds, indicating that light is an important factor. Experiments are to continue till the results are definite.

239. *Hydraulic Experiments.*— An up-to-date Hydraulic Testing Station was started in 1921 on the farm, where meters, measuring and regulating devices, modules, etc., for use on irrigation channels are tested.

240. *Modules.*—The most suitable module so far devised for canal outlets is the Gibb module. This type is now being introduced on certain experimental distributaries. Where the canal supply fluctuates, it is not desirable to use rigid modules such as the Gibb type, and under such conditions semi-modules, which are unaffected by variations in downstream water-level, but give discharges varying slightly with upstream fluctuations of the water-level, have been considered suitable. The question of designing semi-modular types of outlets, flume meter falls and meters were the subject of experiments at distributary No. 5, Mutha Right Bank Canal.

241. *Standing Wave Flumes.*—As a result of last year's experiments the long-throated type of flume was adopted and a standard design prepared. A weir type flume, similar to the above except that the width of the flume was much greater in proportion to the depth, was also designed to suit certain conditions.

242. *Falls on canals and Distributaries.*—Hitherto vertical falls were constructed on canals and distributaries where the slope of the land was excessive. A new design of fall has been worked out at the station which consists of a sloping flume discharging into a downstream chamber in which the excess kinetic energy is dissipated by a standing wave or by baffles projecting from the bed.

243. Experiments on standing wave flume meter falls were continued during the year under report.

244. *Syphon Spillways.*—Experiments on a large scale have been carried out in connection with syphon spillways, which are devices designed to carry off floods from storage works with high efficiency and without making use of any mechanical gates.

245. Two models are under test at the Testing Station; and a full scale syphon, which passes 500 cusecs through a section 5 feet by 4 feet, has been erected just below Khadakwasla Dam, near Poona, and has proved entirely successful. Small model syphons 4 feet and 10 feet in height were also erected at distributary No. 5, and experiments were carried out.

246. *Block Revision.*—Formation of perennial blocks on the Godavari Canals was the most important work carried out during the year. Strong opposition was organized by the tenant farmers against the introduction of blocks, and had to be overcome by explanation and reasoning at meetings in various centres.

Suitability of areas for different crops on the several distributaries of the Nira Right Bank Canal was worked out and the discharges fixed.

247. *Effluent scheme and crop Experiments.*—Effluent from the Poona City sewage is pumped to the Experimental Farm at Hadapsar, where it is diluted with canal water and distributed both to experimental fields and to private lands. It is satisfactory to be able to record that the effluent has proved a very valuable form of manure and one which the people greatly appreciate. It is observed that no deterioration in the physical condition of the soil is caused, and that the outturn from crops is in no way inferior to that obtained by other methods of manuring. The effluent zone was extended to the whole of distributary No. 5 of the Mutha Right Bank Canal during the year under report, and the crops irrigated on effluent were 362 acres of sugarcane, 21 acres of other perennials and 28 acres of seasonal crops.

248. In addition to the crop and effluent experiments, plots have now been treated with varying quantities of water given at various intervals to ascertain the best quantities to give and the most suitable intervals at which to irrigate. The irrigation interval on the canals has long been 10 days between waterings; whereas the cultivators have lately been asking for 8 day intervals. The experiments on the farm show that, except in very shallow soils, which are unsuitable for cane, better results are obtained with 10 day than 8 day intervals, and that the damage done to a crop grown in soil maintained in good physical condition when a watering is delayed is comparatively small. It has also been found that though somewhat greater outturn can be obtained by increasing the water-supply, the increase in outturn is very small compared with increase in water-supply. Experiments were carried out in the water-culture house for finding out the amount of water consumed per pound of dry matter produced in the case of cane. On the effluent farm a turbine of 6 horse power is installed on a fall of 10 feet occurring in an irrigation channel. By means of this power all the cane grown on the farm is crushed.

(c)—*River Gauging*

249. Wherever there is any possibility of developing irrigation, arrangements have been made to gauge the rivers concerned and record the rainfall in the catchment areas. Investigations are also being made as to the silt contents of the water in several rivers.

Note.—With regard to paragraphs 2 and 3 of the Review of the Administrative Accounts by the Accountant General, Bombay, printed at pages v and vi *post*, enquiries have been made from the local officers and the matter has been dealt with separately.

REVIEW OF THE ADMINISTRATIVE ACCOUNTS OF THE BOMBAY PRESIDENCY IRRIGATION BRANCH FOR THE YEAR 1925-26 AS REQUIRED BY ARTICLE 328 OF THE ACCOUNT CODE (FIRST EDITION).

1. Cases in which a change of classification of Projects from Productive to Unproductive or *vice versa* is necessary.

The percentage of return on sum at charge for the last three years in the case of following canals is as given below :—

Works classified as 'Productive' during the year 1925-26.

		1923-24	1924-25	1925-26
1.	Eastern Nara Canals ..	1·97	1·45	·62
2.	Jamrao Canal ..	3·03	2·65	·53
3.	Hasanali Canal ..	3·09	3·98	5·80
4.	Mavinkop Tank ..	3·66	3·75	2·44
5.	Kalri Canal ..	..	2·75	2·56

Works classified as 'Unproductive' during the year 1925-26.

6.	Suttah Canal ..	7·72	14·76	9·59
7.	Baghar Canal ..	12·81	6·61	6·04
8.	Ekruk Tank ..	4·81	4·05	4·46
9.	Nira Left Bank Canal and Shetphal Tank.	4·61	5·22	4·84

The classification of first three works, *viz.*, the Eastern Nara Canals, the Jamrao Canal and the Hasanali Canal have been brought under 'Unproductive' class with effect from 1st April 1926, according to the orders given in Government Memorandum (P. W.) No. 509 (I. W.) dated 5th September 1925.

It has been decided by Government in the Public Works Department in their Memorandum quoted above that the present classification of the Mavinkop Tank as Productive and that of the Nira Left Bank Canal and Shetphal Tank and the Ekruk Tank as Unproductive should continue.

The change of classification of the Kalri Canal from Productive class to that of Unproductive and of the Baghar Canal from Unproductive class to that of Productive will come into effect from 1st April 1927, according to the orders contained in Government memorandum No. 509 I. W. dated 25th June 1926.

It has been decided by Government, Public Works Department, in paragraph 2 of their memorandum quoted above that the present classification of the Suttah Canal as 'Unproductive' should continue.

2. Cases in which an abnormal increase under working expenses is not accompanied by an adequate increase in the receipts.

The following canals come under this class. The working expenses and receipts for the year 1925-26 as compared with those for the previous year are given below :—

	Working Expenses (Direct and Indirect)		Receipts (Direct and Indirect)	
	1924-25	1925-26	1924-25	1925-26
	Rs.	Rs.	Rs.	Rs.
Unharwah ..	93,029	1,14,226	2,33,826	1,95,039
Begari ..	3,97,497	4,56,391	7,43,002	6,40,839
Jamrao Canal ..	6,04,233	6,57,479	8,65,849	7,10,108
Ghar Canal ..	2,26,284	2,89,675	9,23,590	6,82,175
Shahada Channel ..	5,507	10,187	12,492	8,621
Nasrat Canal ..	1,75,170	2,11,445	1,93,098	1,41,066
Chankapur Tank ..	47,954	72,093	57,588	43,971
Godavari Canal ..	3,59,816	3,93,084	5,36,243	4,72,087
Shirsuphal Tank ..	4,404	8,614	6,282	5,803
Hathmati and Kharicut	33,019	41,234	70,213	47,256
Ashti ..	7,720	8,920	30,656	21,780
Muchkundi Tank ..	3,451	4,419	5,301	362
Dharma Canal ..	2,747	4,303	136	—1,386

3. Cases in which receipts show a marked decline and there is no known reason for this.

The following cases come under this class :—

	1924-25	1925-26
Sind.	Rs.	Rs.
1. Desert Canal	5,47,572	4,37,729
2. Unarwah	2,33,826	1,95,039
3. Begari Canal	7,43,002	6,40,839
4. Eastern Nara	5,62,539	4,77,697
5. Jamrao Canal	8,65,849	7,10,108
6. Sukkur Canal	2,27,832	1,52,680
7. Ghar Canal	9,23,590	6,82,175
8. Sind Canal and branches ..	3,10,181	2,14,331
9. Canals in Rohri	1,58,238	1,32,297
10. Western Nara and Pritchard ..	9,29,605	8,02,070
11. Mahiwah	70,725	26,916
12. Dad Canal	2,85,984	2,47,309
13. Nasrat Canal	1,93,098	1,41,066
Deccan and Gujarat.		
14. Hathmati and Khari	70,213	47,256
15. Yerla River Irrigation works ..	28,986	3,649
16. Godavari Canal	5,36,243	4,72,087

This work is a part of the Pravara River Irrigation Project, but separate account has been maintained until the new project is completed sufficiently to give an increased supply of water to other canals—*vide* Government of India's No. 1951-I, dated 18th September 1908, communicated in Government Resolution No. 2721 of 20th October 1908.

Estimate amounting to Rs. 3,14,574 for direct and indirect charges, included in the above project, sanctioned by the Secretary of State and communicated in Government of India's No. 171-I. of 24th June 1922—*vide* Government Resolution No. 2215 of 30th October 1922, has been shown here.

(*a*) Owing to diversion of tail portion of Palkhed Canal the length of distributaries is diminished.
(*b*) These figures have been revised by the Executive Engineer, Nasik Irrigation Division.
(*d*) These figures are for the whole project.
(*e*) Includes the Girna Left Bank Canal extension, as irrigation has begun on the extension since 1921-22.
(*f*) As actually completed.
(*g*) The culturable and irrigable areas commanded as given in the second revised project of the Pravara River Works are 182,976 and 57,000 acres respectively; these include old areas (culturable and irrigable at present) under Lakh Canal *viz.*, 25,536 and 11,280 acres respectively, which are now included in those of the Pravara Left Bank Canal, the Lakh Canal having since ceased to exist. As irrigation has begun on the extended Pravara Left Bank Canal figures shown in the statement are for the new Canal (including those for the Lakh Canal). The figures for the old Pravara Left Bank Canal are not shown.
(*h*) These figures do not include the amount of widening the Nira Left Bank Canal.
K 1,514 is shown as calculated in the Nira Right Bank Canal Project, 1,435 is required with a duty of 500 acres per cusec.
(*l*) The Lakh Canal having ceased to exist since 15th June 1925 the lengths of the main canal and distributaries thereof have now been included in the lengths of the branch canals and distributaries of the Pravara Left Bank Canal.

(a) Figures are given in Statement I-A under the Girna Left Bank Canal, Godavari Right and Left Bank Canals Nira Left and Right Bank Canals, Pravara Right and Left Bank Canals, Kadva River Works and the Gokak Canal.

† Estimated rainfall in the catchments.

* Decimals have been omitted in these cases.

(c) These figures are for new Lloyd dam at Bhatgar. The heights of old dam known as Lake Whiting above lowest foundation and above lowest point in river bed were 127 feet and 108 feet respectively.

‡ The catchment area of the drainage channel is 13 sq. miles in addition.

§ At provisional F. S. L. R. L. 103·50.

|| At original F. S. L. R. L. 105·00.

(*d*) These figures are for new Lloyd dam at Bhatgar.
(*e*) This area is also commanded by the Nira Left Bank Canal.
(*h*) Storage available after deducting 508 million cubic feet which cannot be used on account of the Poona Water Supply.
(*j*) Includes 7,133 acres commanded by Matoba Tank.
(*j*) After deducting silt deposits.
(*f*) Includes 38½ miles of Branch Canal.
(*k*) Waste wier gates not yet installed and so storage at 270 ft. height has not been shown which is 12,092m. c. ft

Note.—The bold figures in brackets represent areas actually irrigated during the respective seasons and the duties have during the rabi season are assessed in Kharif papers and *vice versa*. In the rabi season in addition to pure rabi crops the rabi area.

Note by the Superintending Engineer, Central Circle :—

As perennial and eight months crops are irrigated during the rabi season, in order to obtain the figures of duty for the the rabi season are added to areas of rabi in column 4 and the total so obtained is divided by figures of rabi discharges

(*a*) High duties are due to timely rainfall though less in quantity during rabi season which permitted less number of

(*b*) The difference between the discharges " At head " and " utilized " is due to canal water having been let into

(*c*) Low duties are due to scattered nature of irrigation. The duties shown against the Kadwa River Works

(*d*) High duties are due to timely and well distributed rainfall in the area irrigated during kharif season and to

(*e*) The duties on the Godavari canals are low and divergent as the proportion of sugarcane and other perennial crops

(*f*) The low duties on the Pravara canals are due to the fact that irrigation is yet under development, and partly due to

(*g*) The high duties on the Shetphal Tank are due to the smallness of channel and concentration of irrigation.

(*h*) Figures of " utilized " discharge are not available as the quantity let into the Matoba tank could not correctly be Cantonment and also for industrial purposes.

(*i*) The low duties on the Mutha canals are due to high proportion of sugarcane and other perennials which require

(*j*) There was no discharge from these tanks in the hot weather season. The average discharge and duties are therefore during the monsoon and rabi seasons there is no discharge from these tanks for days together due to rainfall and calculating average discharge and duties.

(*k*) This Tank received a very meagre replenishment during the kharif and the rabi seasons, only one watering could be

(*l*) Both these tanks did not practically receive any replenishment in the kharif season. Only one watering could be

(*m*) No water was admitted into the canal practically till the end of the kharif season.

(*n*) The high duties on the Matoba tank are due to the concentration of irrigation on a small channel and

*Area under consolidated assessment.

‡Out of the average discharge of 90 cusecs, 23 cusecs were utilized in kharif season and 67 cusecs were

§5 Cusecs were let down in the Bokh reservoir for domestic purposes and the rest utilised in the rabi season.

¶This represents irrigation by lift from wells situated in the bed of Tranza tank.

** Includes leakage and absorption in canal on the quantity delivered into the Bhojwa and Bokh feeder being

††This represents an area of 28 acres indirectly irrigated by underground percolation from the Mutha Lef

‡‡For hot weather period only. From 15th June 1925 the Lakh canal ceased to exist.

				§ 28			§ 28		

* Area under consolidated assessment.

† The culturable and irrigable areas commanded as given in the 2nd revised project of the Pravara River Works are 182,976 and 57,000 acres, respectively. These include the old areas (culturable and irrigable at present) of Lakh Canal, *viz.*, 25,536 and 11,280 acres, respectively. The balance is distributed between the two Pravara canals in proportion to the gross commanded area which is 228,720 acres.

‡ Lakh canal was in operation up to 14th June 1925 after which date it ceased to exist as it was amalgamated with the Pravara Left Bank Canal.

§ An area of 28 acres is indirectly irrigated by under ground percolation from the Mutha Canals.

‖ The culturable area commanded is 447,726 acres and the area at present irrigable is 20,000 acres.

¶ At Prantij.

** At Ahmedabad Civil Hospital.

NOTE.— (1) For lift irrigation in the Deccan irrigation circle full flow rates are charged *vide* G. R. No. 1947 of 20th November 1923.

(2) For lift irrigation half the ordinary rates are charged in other circles.

(3) Double the ordinary rates are charged as penal rates for taking water without permission.

(4) Leakage or percolation rates are the same as ordinary rates.

(5) Water rates for non-irrigational purposes are to be charged at Re. 1, Rs. 2 and Rs. 4 per 10,000 cubic feet—*vide* G. R. No. 851, dated the 7th April 1924.

(6) Water rate of Rs. 2 per acre per watering given to those who are not regular irrigators or holders of rabi leases—*vide* G. Rs. Nos A-1-1759 and A-/1-2525, dated the 5th July 1906 and 3rd March 1916, respectively.

* Lands wholly assessed at consolidated rates.

‡ For sugarcane and pan gardens double the seasonal rates are charged.

§§ To be in force up to 15th June 1925 and then it should be Rs. 5 up to 15th June 1930.

¶ This rate is levied in proportion to the time for which water is supplied according to the scale laid down in Note (*e*) to the schedule attached to G. R. No. A-1-2213, dated the 15th October 1910—*vide* G. R. No. A-1-6007, dated 27th May 1919.

** For one or more waterings to mature crops for which no applications for irrigation throughout the season are previously submitted.

A.—For sugarcane.

B.—For perennial crops other than sugarcane.

C.—For pan gardens.

(*a*) Rates sanctioned in G. O. No. A-I-1576, dated the 12th February 1918.

(*b*) Rates sanctioned in G. O. No. A-I-11465, dated the 28th August 1919.

(*c*) Rates sanctioned in G. Rs. Nos. A-I-1431 and 1964, dated the 28th June 1910, and 4th October 1911, respectively.

(*d*) Rates sanctioned in G. R. No. A-I-12087, dated the 11th December 1918, were in force up to 15th June 1935 from which date the Lakh canal ceased to exist, and the area commanded by this canal was incorporated in the Pravara Canals area.

(*e*) Rates sanctioned in G. R. No. A-I-6371, dated the 27th June 1917 were in force up to 14th February 1926. With effect from 15th February 1926 the following rates were sanctioned for a period of six years ending 14th February 1932—*vide* G. R. No. 3952, dated 20th April 1926.

		Rs.	
Sugarcane and pan gardens	.. ..	*66	*This rate has, however, been postponed and the rate of Rs. 45 per acre is to be levied pending the decision of Government on the question of water rates and irrigation on the canals in the Deccan—*vide* G. Rs. Nos. 3952, dated 23rd October 1926, 17th March 1927 and 13th July 1927. The water rate of Rs. 50 for sugarcane within the Poona City and Suburban Municipal and Cantonment limits or within one mile of those limits is to continue up to 14th February 1928.
Other perennial crops	.. ..	33	
Two seasonal crops ..	Light	12	
	Heavy	18	
Monoon crops ..	Light	4	
	Heavy	6	
Rabi crops ..	Light	8	
	Heavy	12	
Hot weather crops ..	Light	10	
	Heavy	15	
Single watering	.. ..	2	

For the Matoba tank, with effect from 15th February 1926 up to 14th Fubruary 1932, the rates for sugarcane and pan gardens are double the seasonal rates and for other perennial crops single seasonal rates when water is available. In the case of other crops, the rates are the same as those on the Mutha Canals.

A uniform rate of Rs. 3 per acre has been sanctioned for lands let out for cultivation in the basin of Lake Beale—*vide* G. R. No. A-I-2484 of 13th October 1922.

(*f*) Rates sanctioned in G. R. No. A-I-11436, dated the 25th July 1921 were in force up to 14th February 1926. With effect from 15th February 1926, and up to 14th February 1932, the same rates as those on the Nira Left Bank Canal and the Godavari canals have been sanctioned—*vide* G. Rs. Nos. 3952, dated 20th April 1926, 23rd October 1926, 17th March 1927 and 13th July 1927.

(*g*) Rates sanctioned in G. R. No. A-I-5358, dated the 30th March 1921—*vide* also G. R. No. 3952, dated 26th November 1923, and G. R. No. 3952, dated 29th November 1924, water is not to be reserved for perennial irrigation if available, it is to be issued at double the hot weather rate.

(*h*) Rates sanctioned in G. R. No. A-I-2213, dated the 15th October 1910, and G. R. No. A-I-17640, dated the 18th November 1921. Seasonal rates are to be charged for other perennials.

(*i*) Rate sanctioned in G. R. No. A-I-879 of 28th January 1918 were in force up to 14th February 1926. With effect from 15th February 1926 and up to 14th February 1927 the rate was Rs. 22. The block rate is to be calculated in the future according to the formula : Block rate $= \frac{\text{cane rate}}{3}$ *plus* Rs. 7.

j From 15th June to 15th October.

k From 16th October to 14th June.

l From 15th February to 15th June.

m From 15th June to 15th October or 15th July to 30th November.

n From 15th October to 15th February.

(*o*) Sanctioned in G. Rs. Nos. 6573, dated 8th January 1925 and 12th March 1925.

(*s*) In force up to 15th February 1932—*vide* G. R. No. 334, dated 17th June 1926.

t For the whole year.

u Rates sanctioned in G. R. No. 6243, dated 3rd October 1924 and will remain in force up to 14th February 1927.

v For sugarcane irrigated from 15th June to 15th February.

w Rates sanctioned for a period of five years ending 31st March 1930 in G. R. No. 6095, dated 22nd October 1924.

x For sugarcane, betel leaves, etc., for 12 months.

y For eight months from 15th June to 15th February.

z For eight months from 15th October to 15th June or 1st August to 31st March.

a Rates sanctioned in G. Rs. Nos. 836, dated 8th October 1923, and 836, dated 23rd April 1924, and 836, dated 29th July 1924, are to be in force up to 31st March 1929.

a^1 Rates sanctioned until further orders—*vide* G. R. No. 156 A-I-I 112, dated 12th July 1894, and 4855, dated 5th March 1924.

a^2 Rates sanctioned in G. Rs. Nos. 825, dated 30th August 1924 and 825, dated 1st November 1926, are to be in force up to 15th June 1930.

a^3 Rates sanctioned in G. R. No. 922, dated 28th March 1924, are to be in force up to 31st July 1928.

a^4 Rates sanctioned in G. Rs. Nos. 815, dated 18th February 1925, and 815, dated 13th November 1926 are to be in force up to 15th June 1930.

a^5 Rates sanctioned in G. Rs. Nos. 5412, dated 11th May 1925, and 15th December 1926 are to be in force up to 15th June 1930.

a^6 Rates sanctioned in G. R. No. 6482, dated 19th December 1924, are to be in force up to 31st March 1930.

a^7 For ordinary rabi.

a^8 For restorative crops grown after rice.

a^9 In either kharif or rabi season.

a^{10} Rates sanctioned for the period of five years ending 31st March 1927 in G. R. No. 1577, dated 20th April 1922.

a^{12} Rates sanctioned in G. R. No. A-I-11108, dated 9th July 1921.

a^{13} Rates in force for five years ending 15th February 1930—*vide* G. R. No. 6529, dated 17th January 1925.

a^{14} For sugarcane and pan gardens double the ordinary rates are charged.

a^{15} In force for ten years ending 15th June 1930—*vide* G. O. No. A-1-16033, dated 8th December 1919.

a^{16} In force till 31st March 1931—*vide* G. R. No. 8096, dated 4th January 1926.

a^{17} The perennial rate for sugarcane and pan gardens.

a^{18} In force from 16th October 1920 to 15th October 1925—*vide* G. O. No A-1-5220, dated 29th March 1921. Rate for late eight months crops during this period is Rs. 12.

a^{19} Rates sanctioned in G. R. No. 6573, dated 30th October 1924 in force up to 14th February 1926. With effect from 15th February 1926 and up to 14th February 1932, the same rates as those on the Nira Left Bank Canal and the Godavari Canals have been sanctioned—*vide* G. Rs. Nos. 3952, dated 20th April 1926, 23rd October 1926, 17th March 1927 and 13th July 1927.

a^{20} Rates in force for the three years ending 14th October 1928—*vide* G. R. No 5983 of 6th July 1925. Rate for late eight months crops during this period is Rs. 13.

b^{1} To be in force up to 14th June 1926. *Vide* G. R. No. 7736 dated 30th October 1925

b^{2} To be in force from 15th June 1926 up to 14th February 1931. *Vide* G. R. No 7736, dated 30th October 1925.

* As actually completed.
† Area under consolidated assessment.
(a) The Lakh Canal having ceased to exist since 15th June 1925, the lengths of main canal and distributories thereof and the area under command in columns 8 and 9 are included in the lengths of the Pravara Left Bank Canal and distributaries thereunder, as also the area.
(b) This represents area indirectly irrigated by underground percolation from the Mutha Left Bank Canal.
